The Idea Behind It

having a geeky tech side, I wanted my website to reflect who I was. here I thought about making a mock desktop for the user to explore what goes on in my laptop. I use my laptop 24/7 for coding projects, browsing the internet for weird topics, or even watching youtube videos! that statement also goes for my phone.

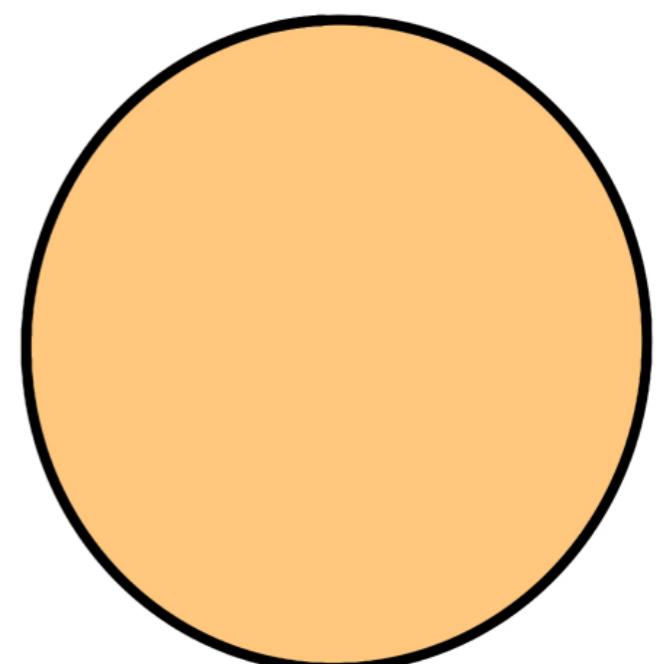

HEX VALUES

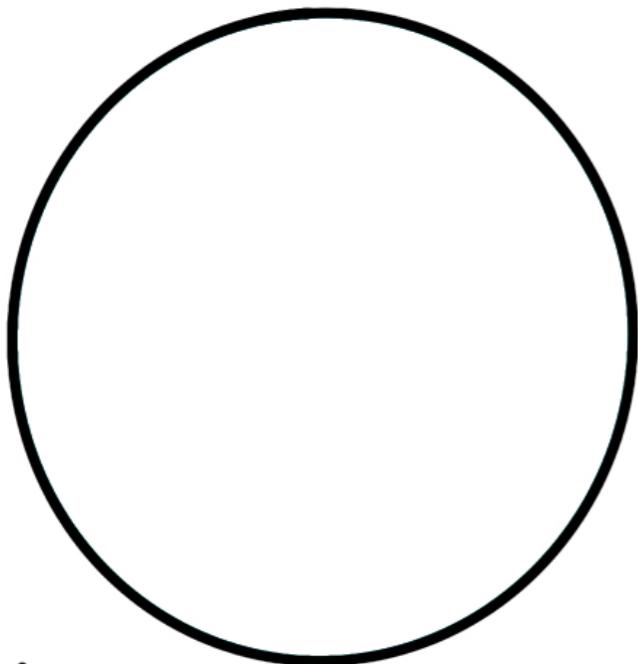

#29c7d7

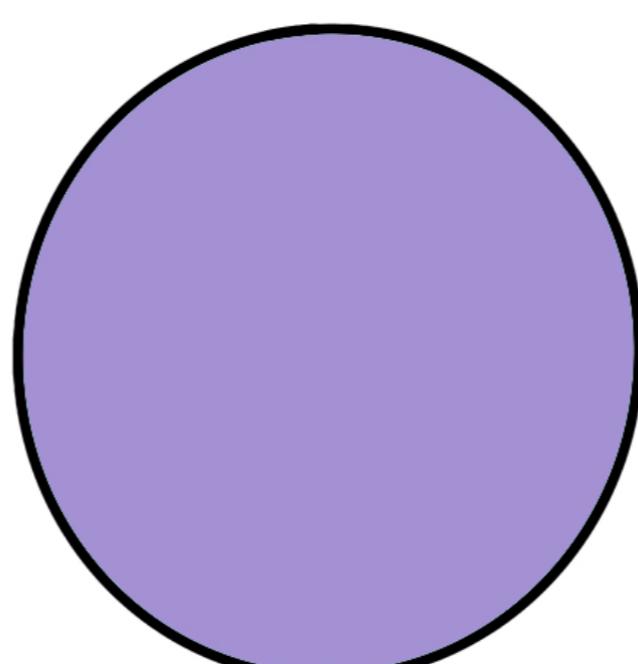

#fffc0c9

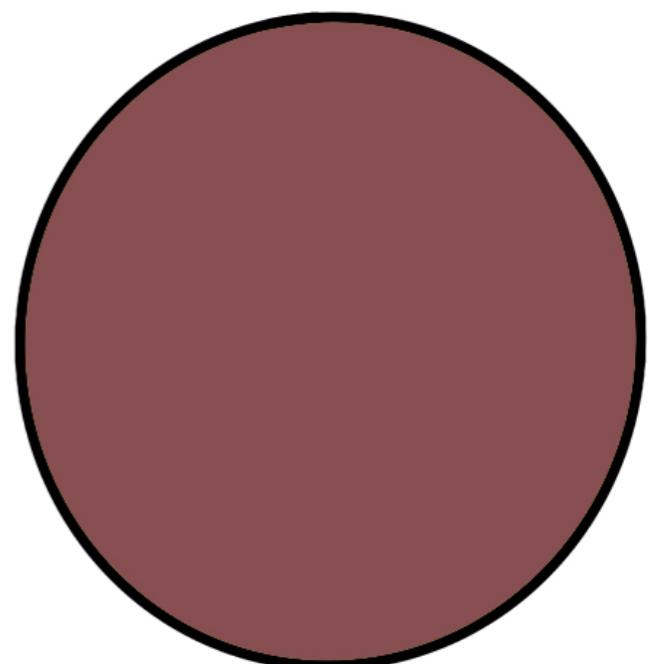

#fffc87e

#ffffff

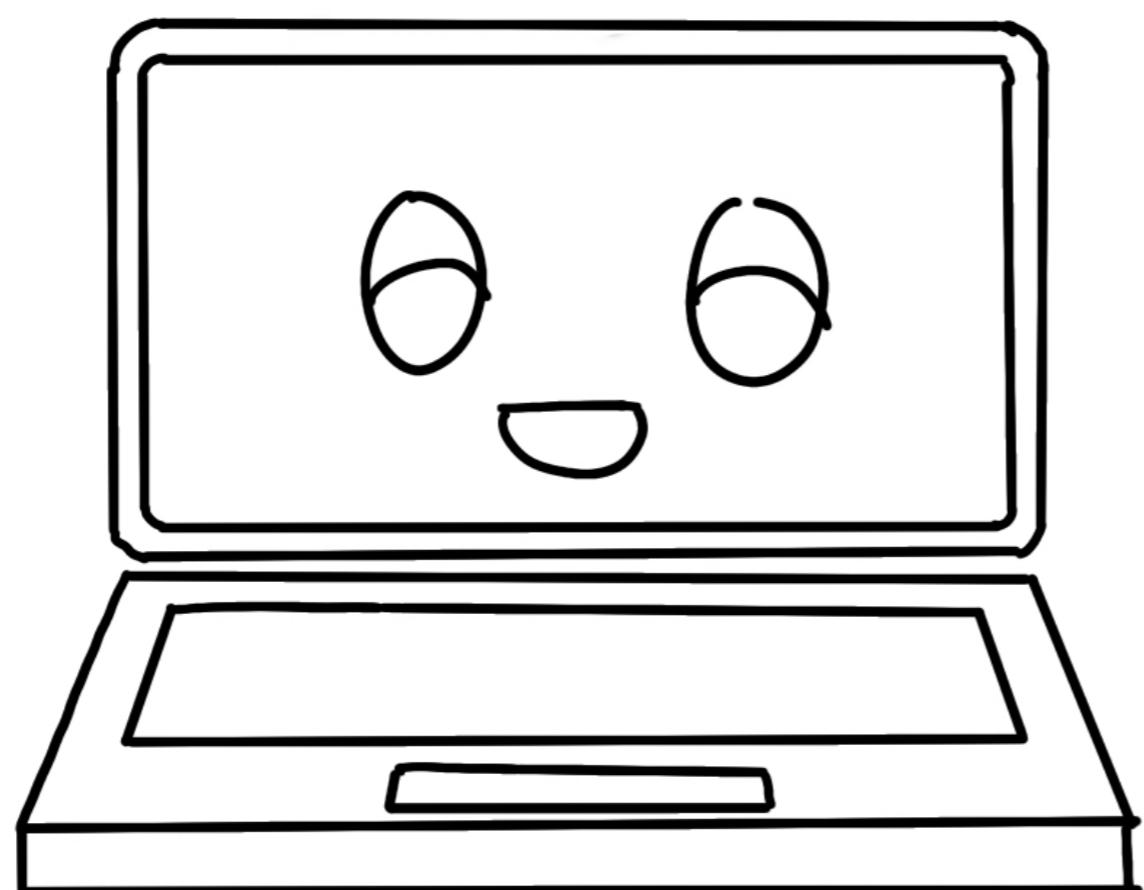

#a491d3

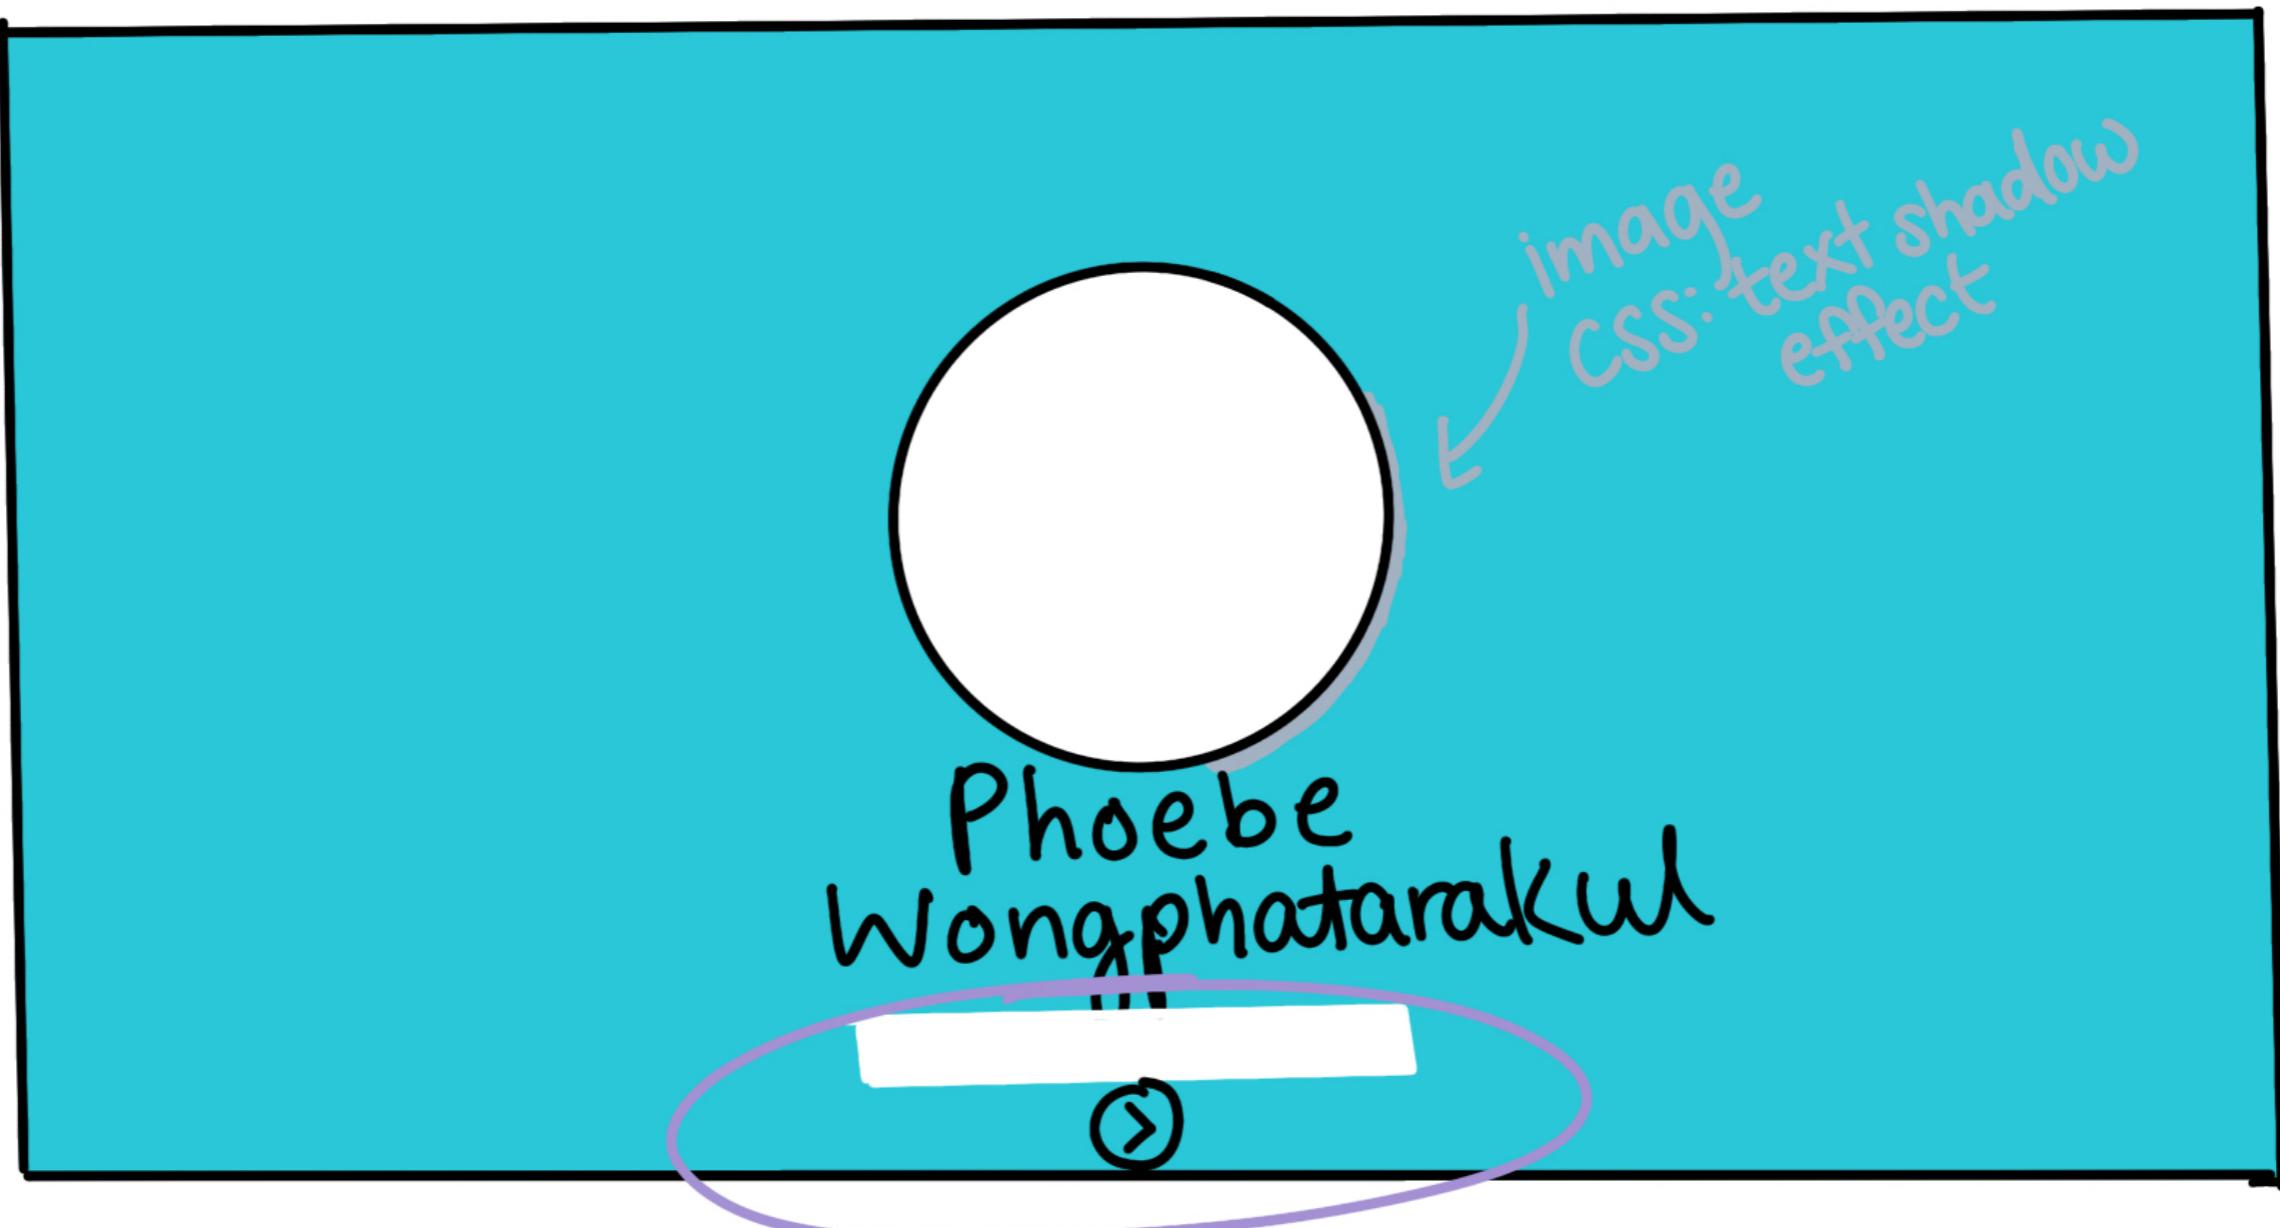

#874f52

Desktop
Wireframe

LOGIN PAGE (index.html)

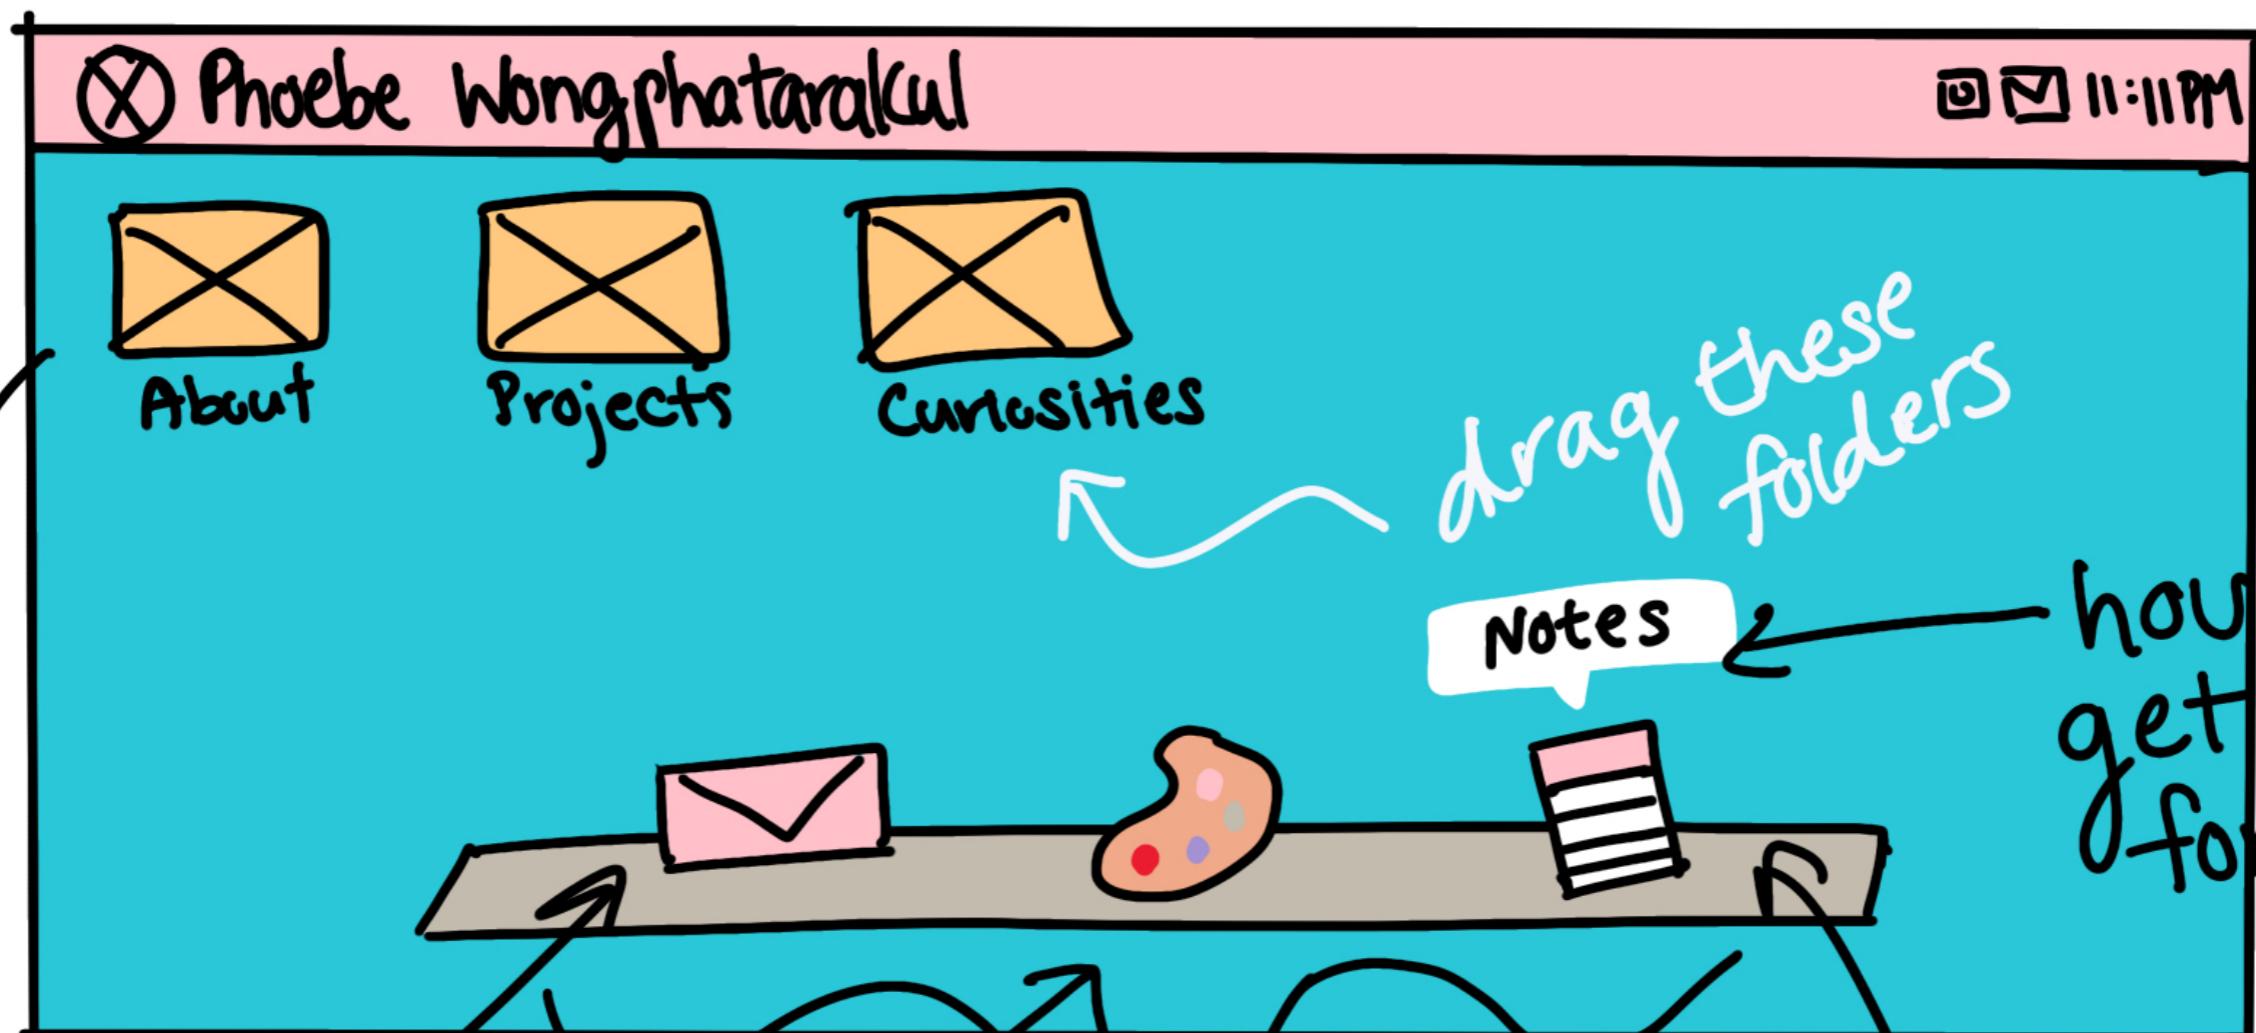

- Javascript
 - tracker = 0;
 - once click picture, "enter password" bar + button appears → tracker++;
 - if click again, bar + button disappears → tracker--;
 - users can type in any password that they want.

- doesn't appear until user clicks image (just like the macbook login functionality)

Add - Ons

- preloading into the home page

HOME PAGE (home.html)

- draggable & popup folders
- draw personalized folders themed to title

- click to popup, but can't drag
- display: flex;
- justify-content: space-around;
- position: absolute;
- bottom: 10%;

~~Settings~~

- change header menu

- change background

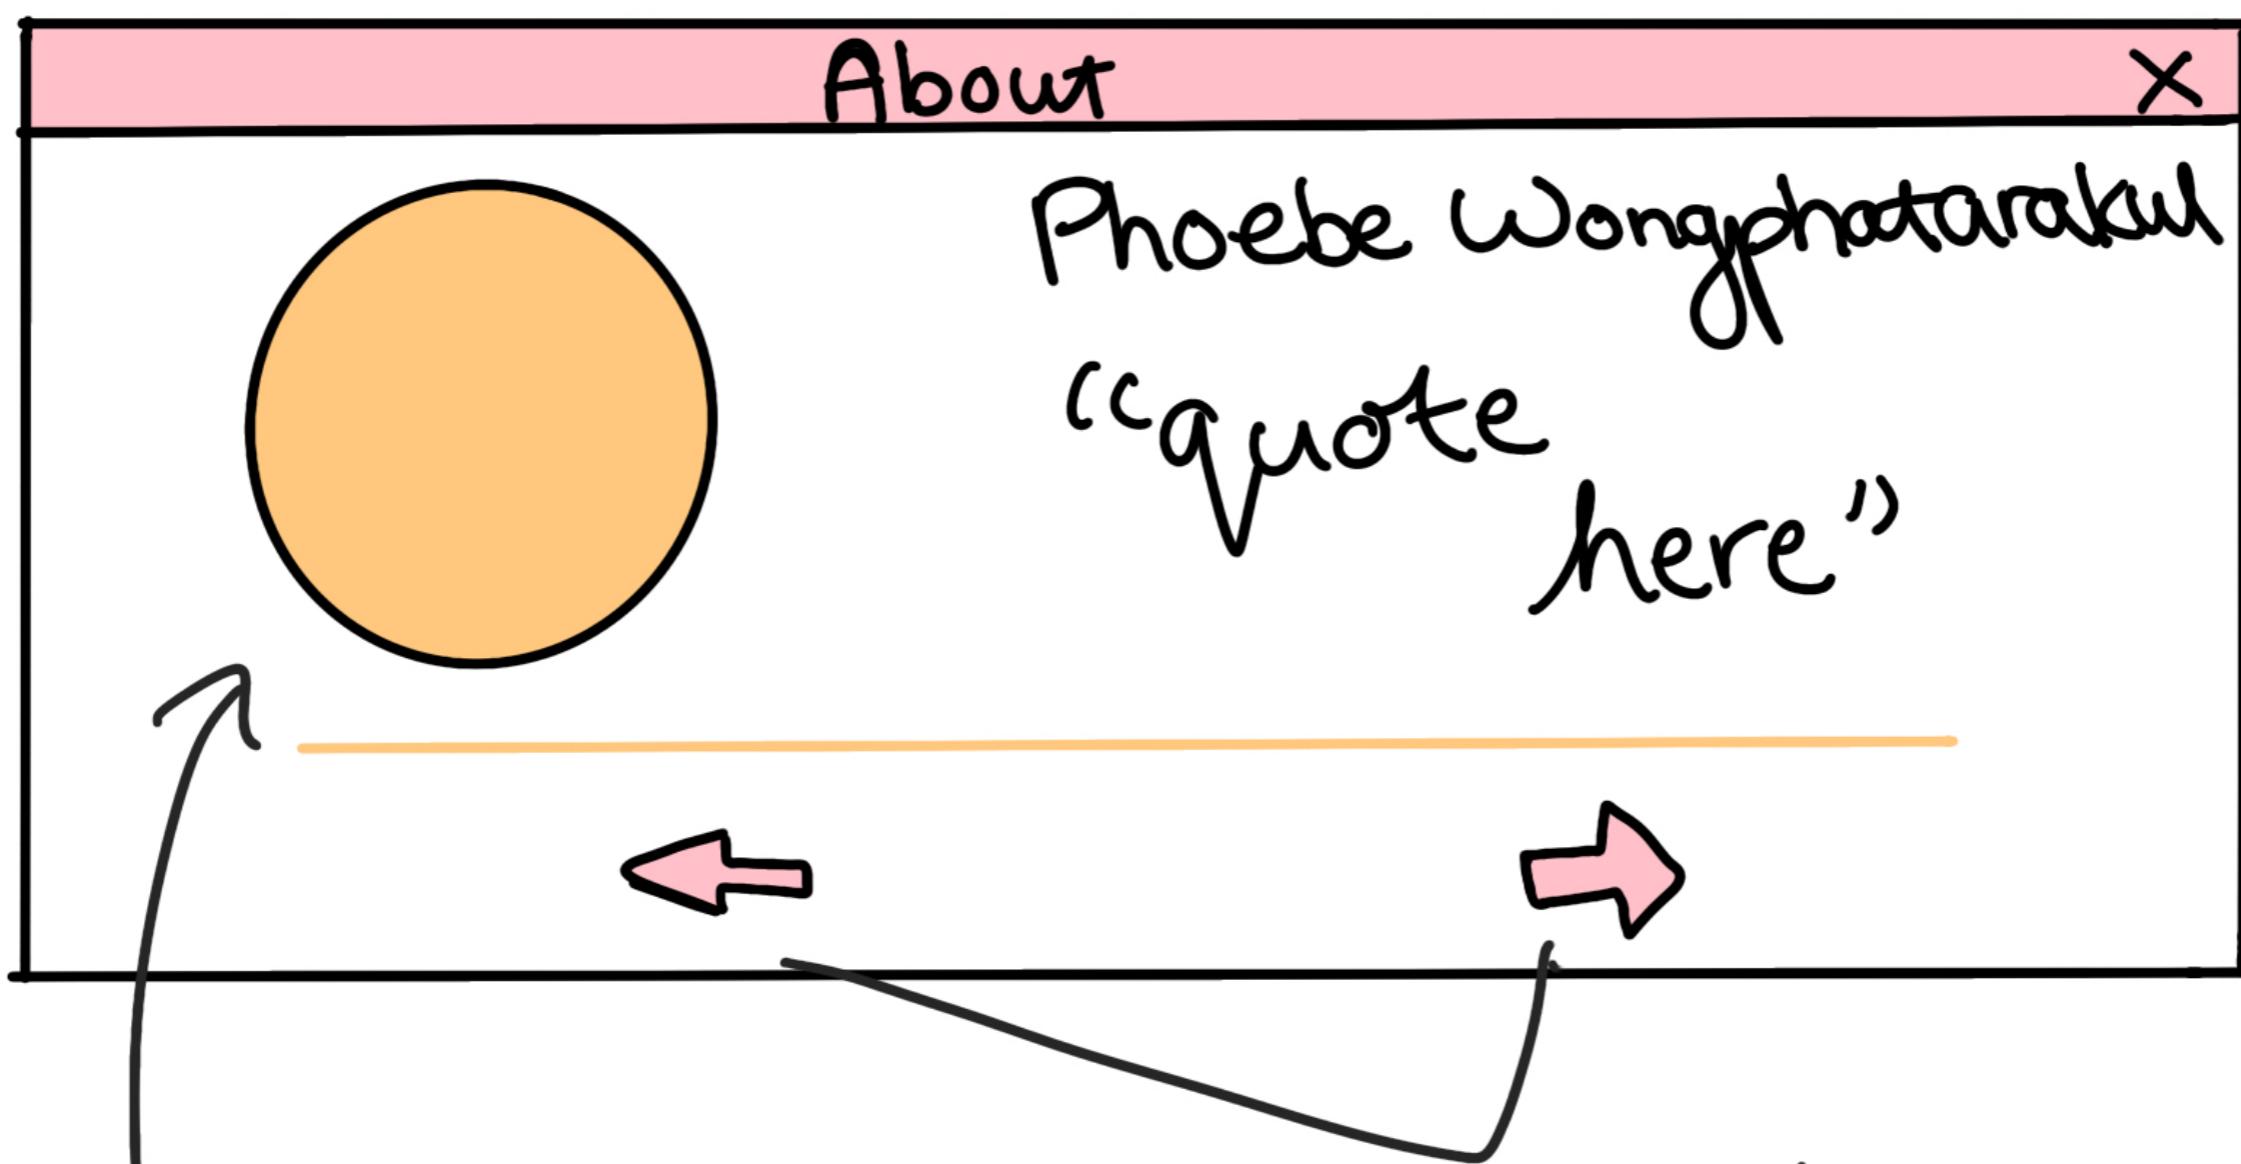

- local storage

Add - Ons

- add arrows to show a tutorial like how folders are draggabl

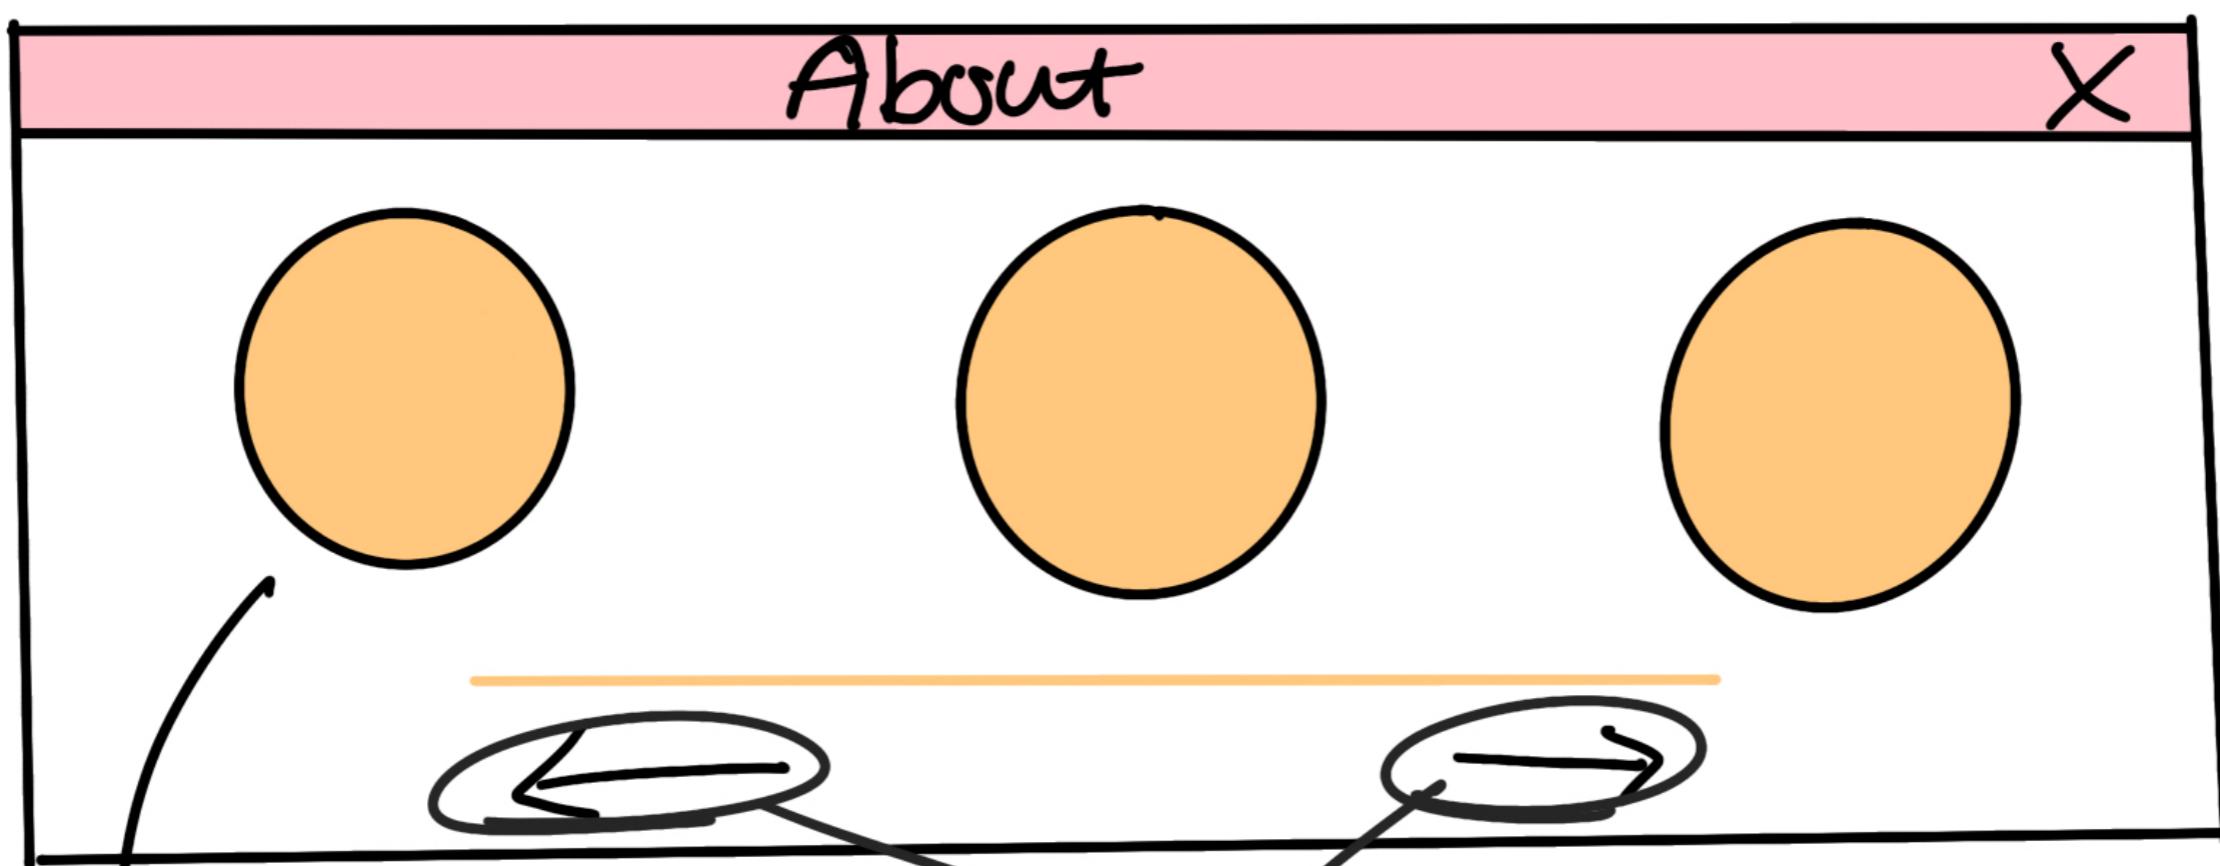

About Popup

drag move cursor

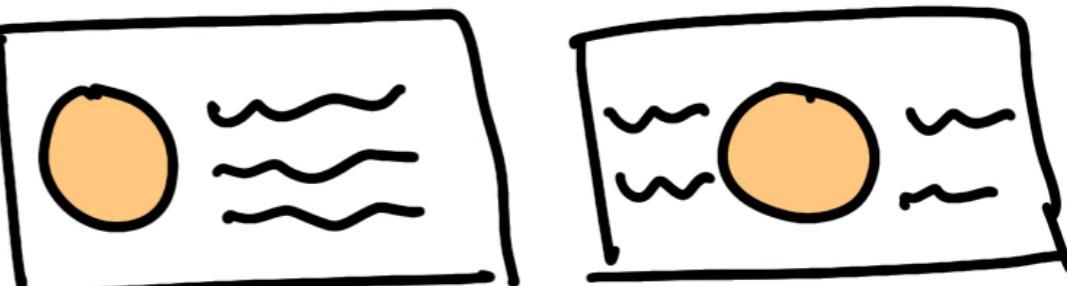

- picture of self :-)

- interactive arrows that allow the user to go to the "next" page
- visibility change in JS
- position: absolute;

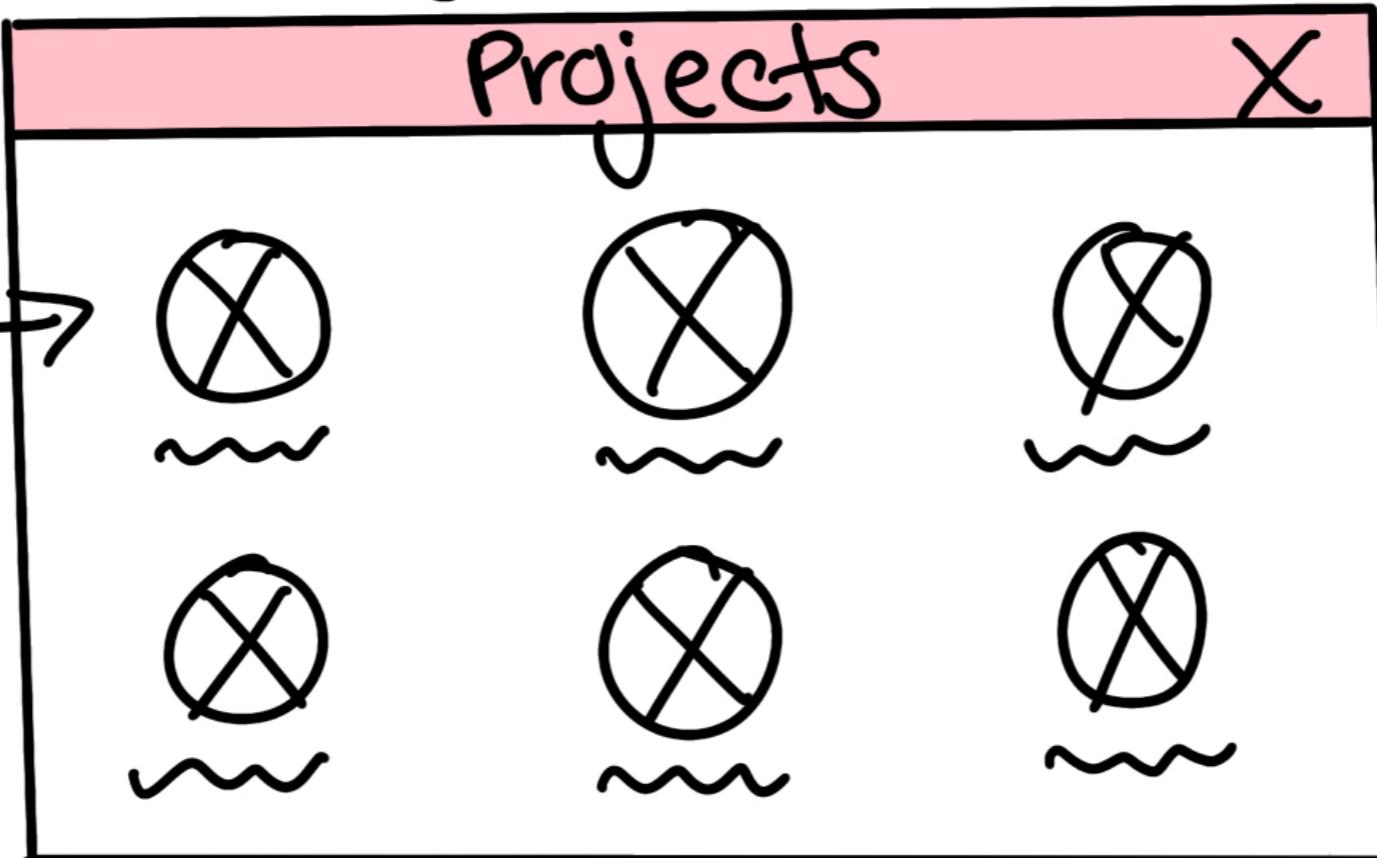

When you hover mouse on image, text explaining image appears + other img disappear

- Same arrows as before
→ ex

Projects Popup

- click on project to reveal details
- hover over img makes it bigger

drag move cursor
scroll down for more projects

LOGO HERE

how it would look if user pressed the project icon

ex is for PSEUDO

back page to menu

exit the popup

- after this line you need to scroll down

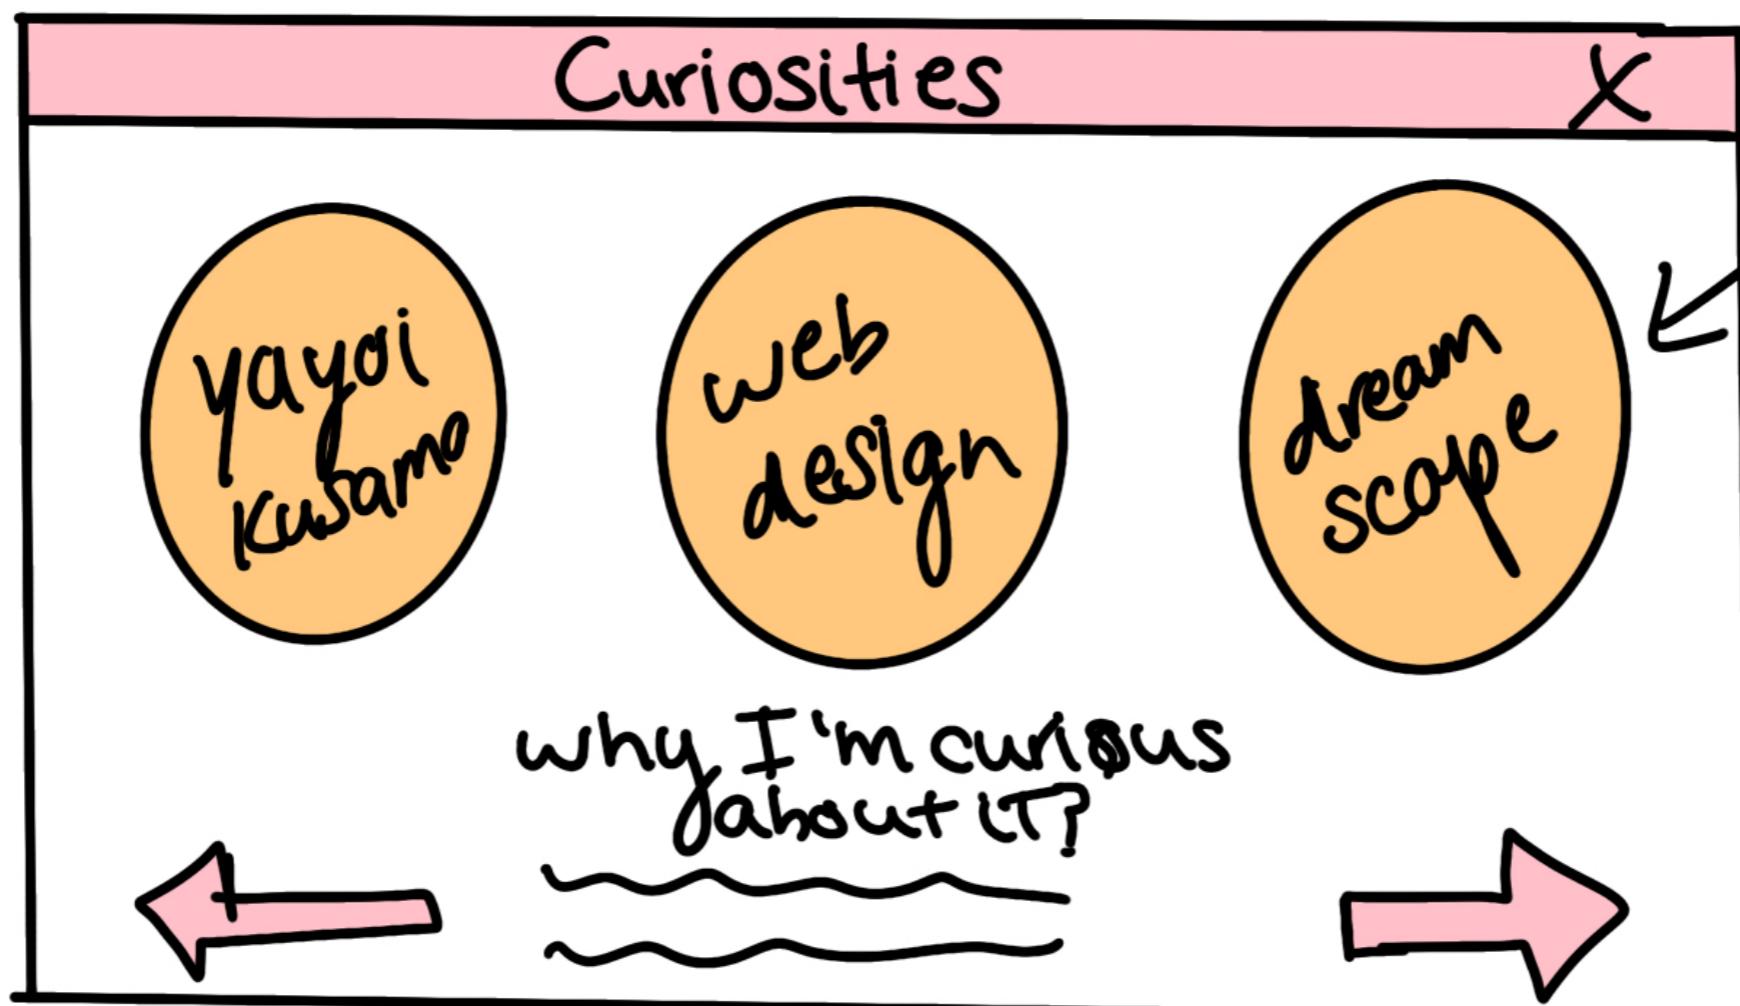

} this part may change for each project

links to website
< a > < /a >

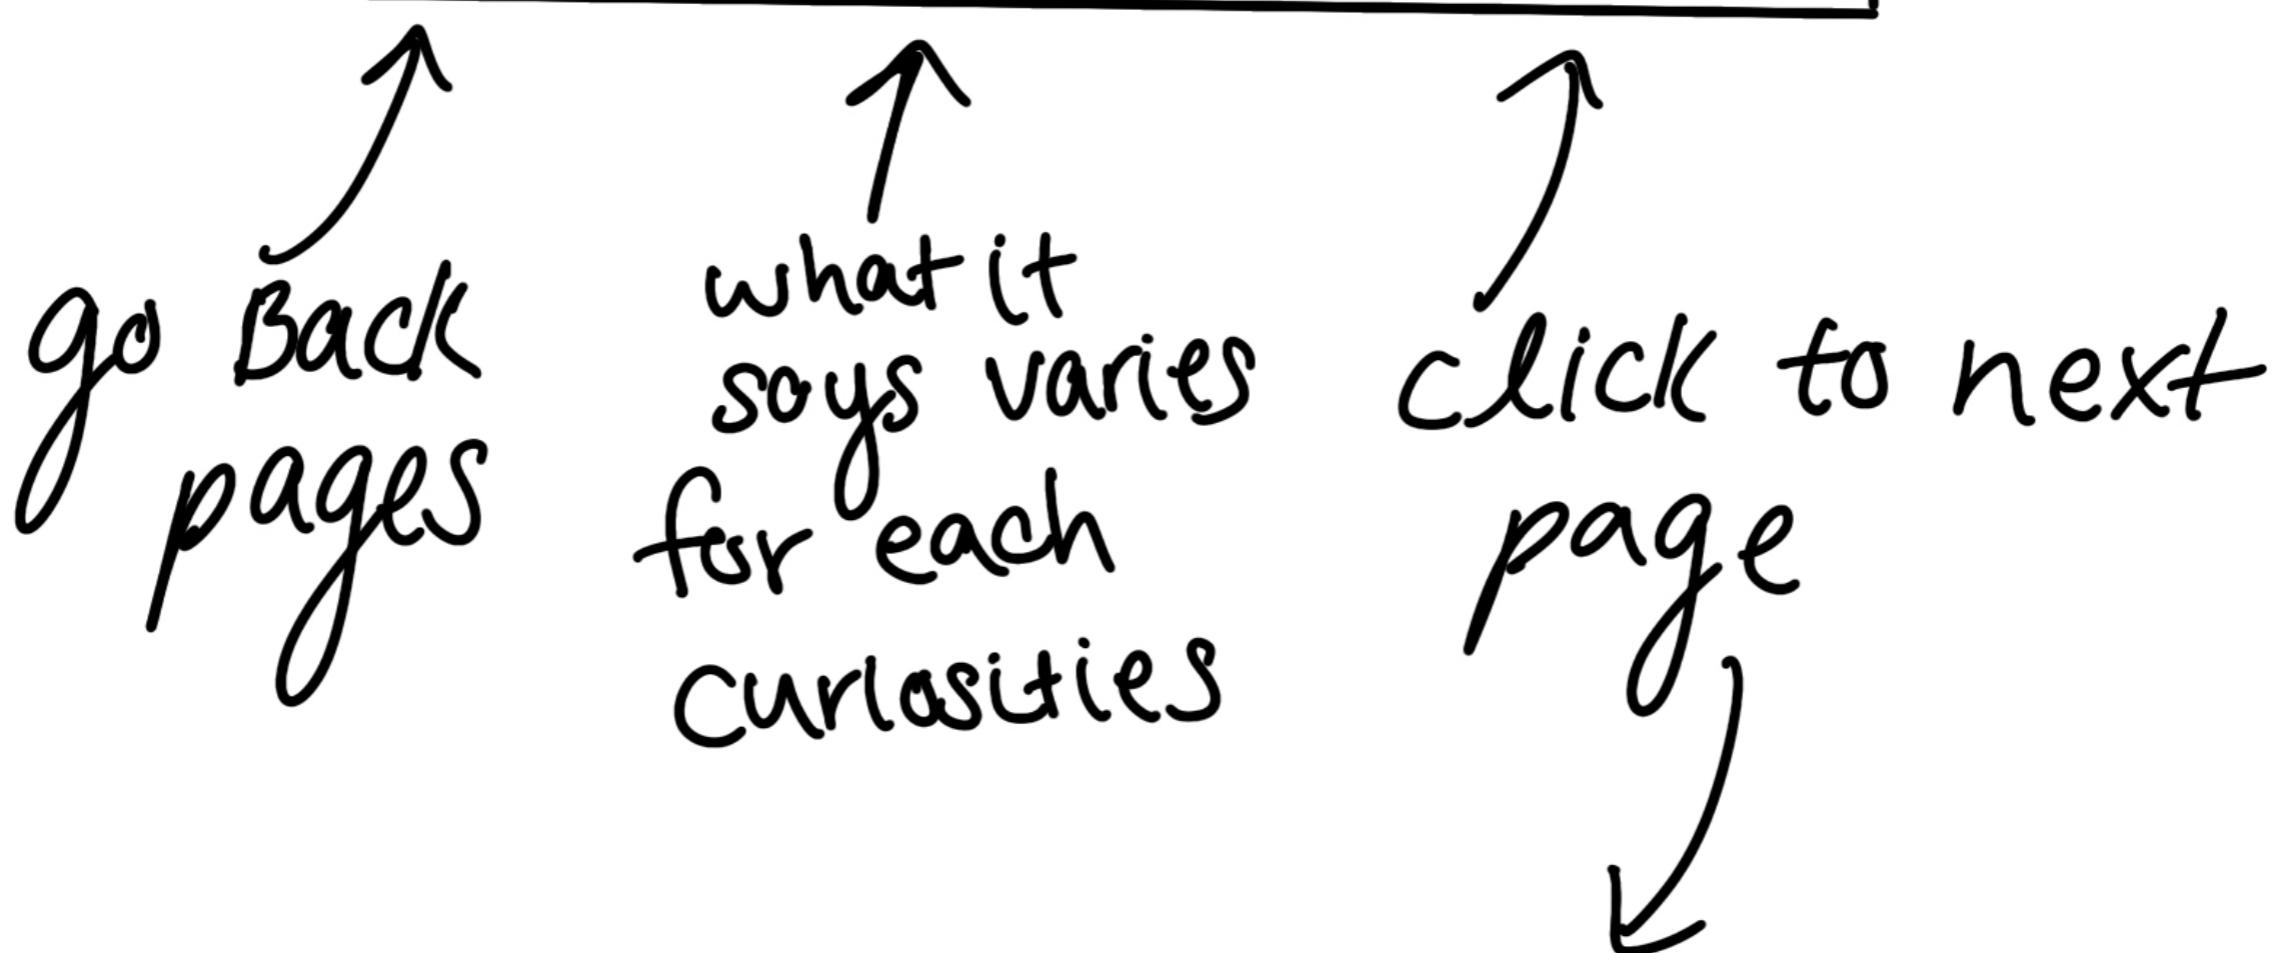

Curiosities Popup

drag move cursor

#1

click on img to see why I like the thing

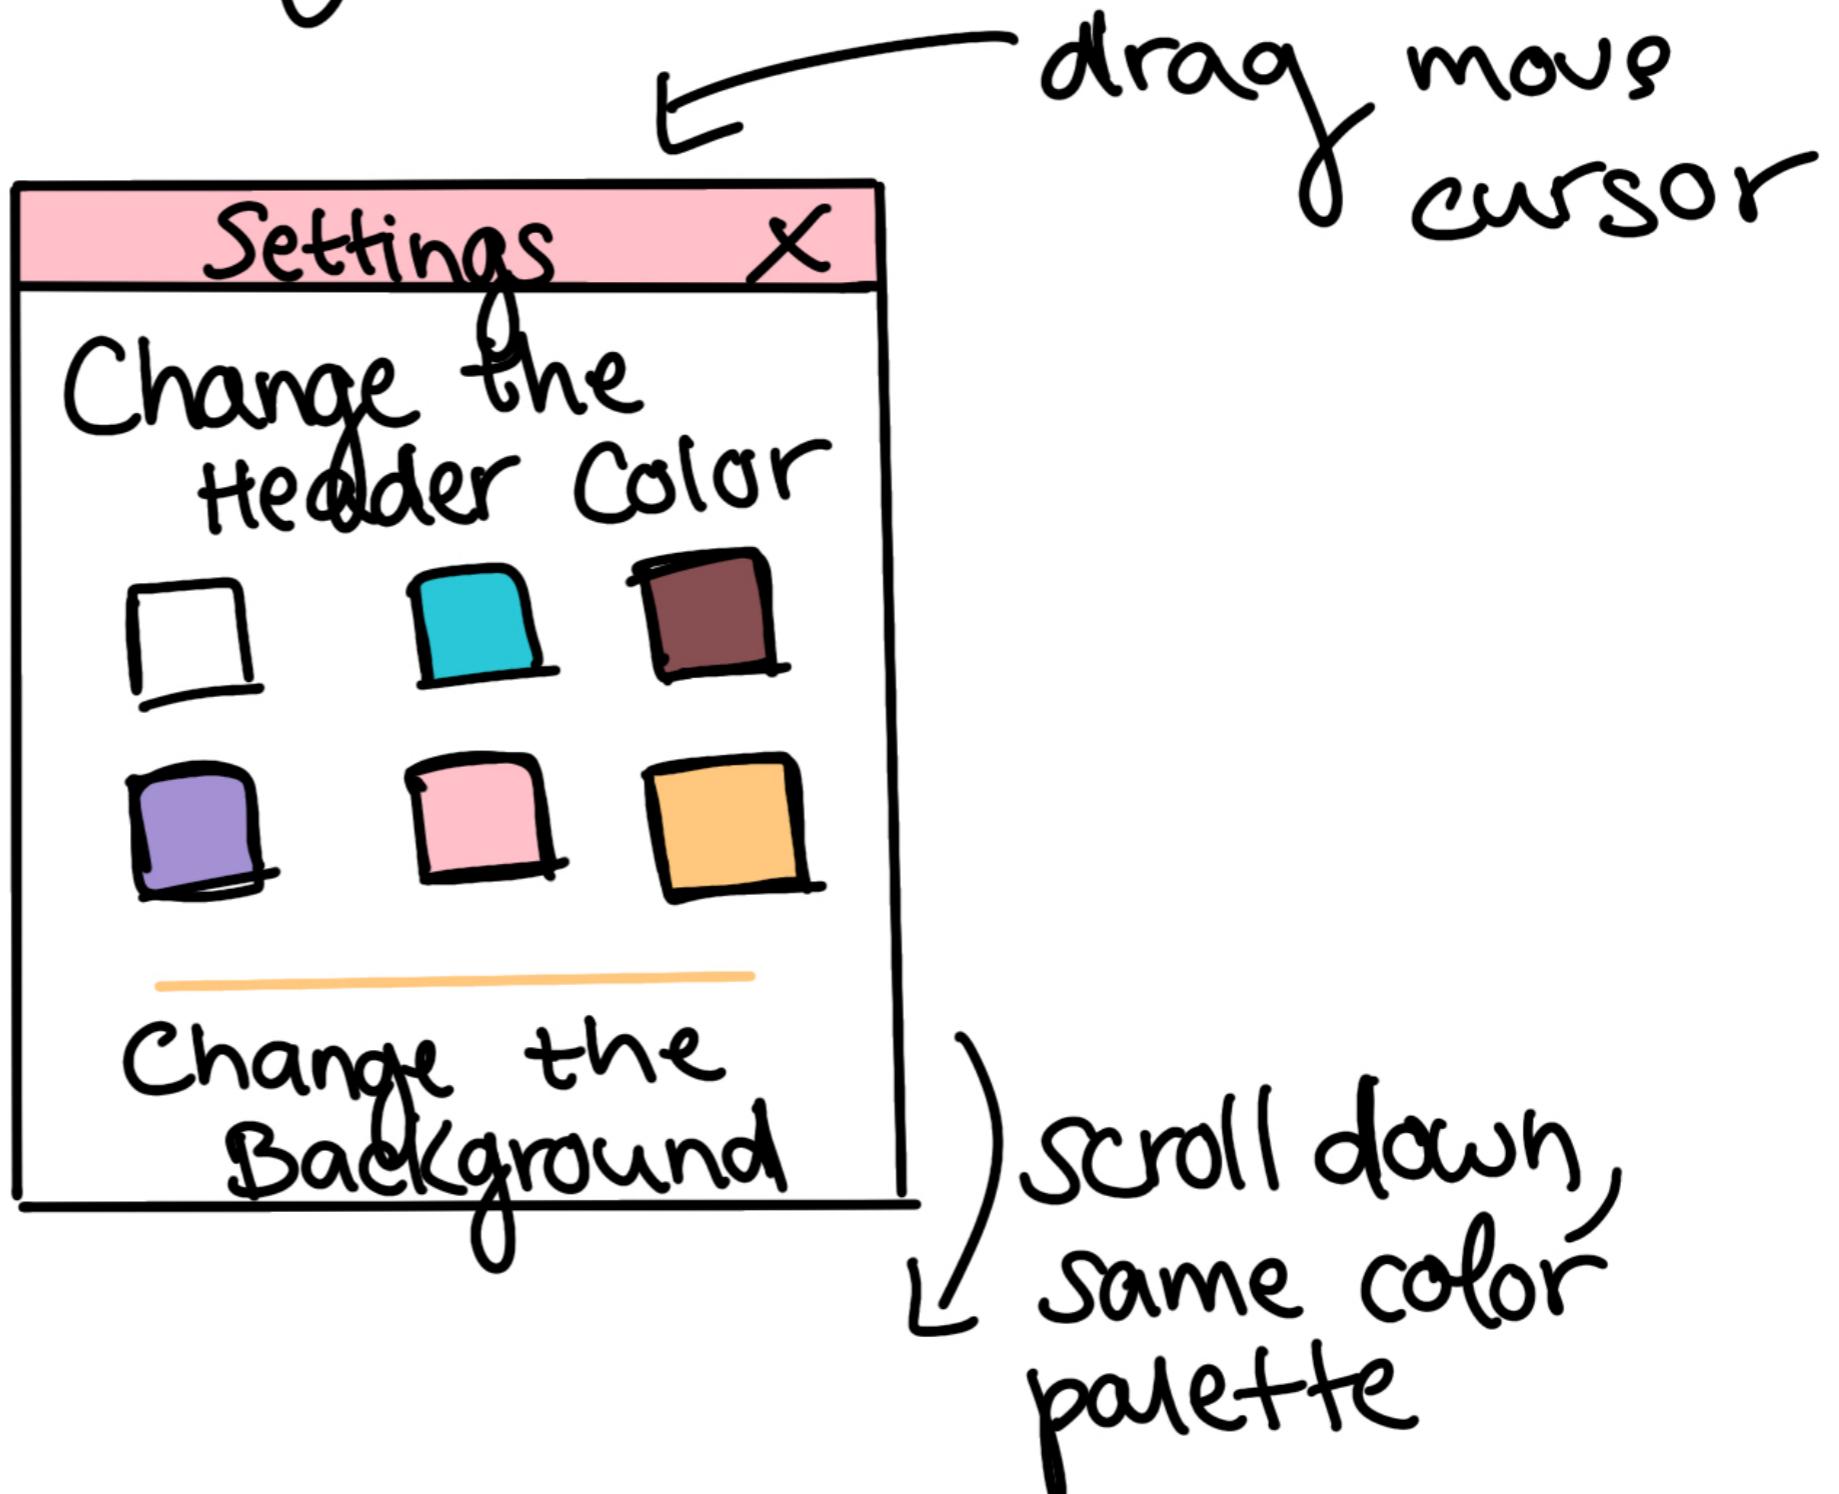

#2

[links to my fav articles](#)

when hover on text it enlarges

Settings Popup

- positioning on the left hand → so that user can open other popups at the same time

Code:

Javascript →

- create variables
- `setItem();`
- `___.on("click",
showColor)`

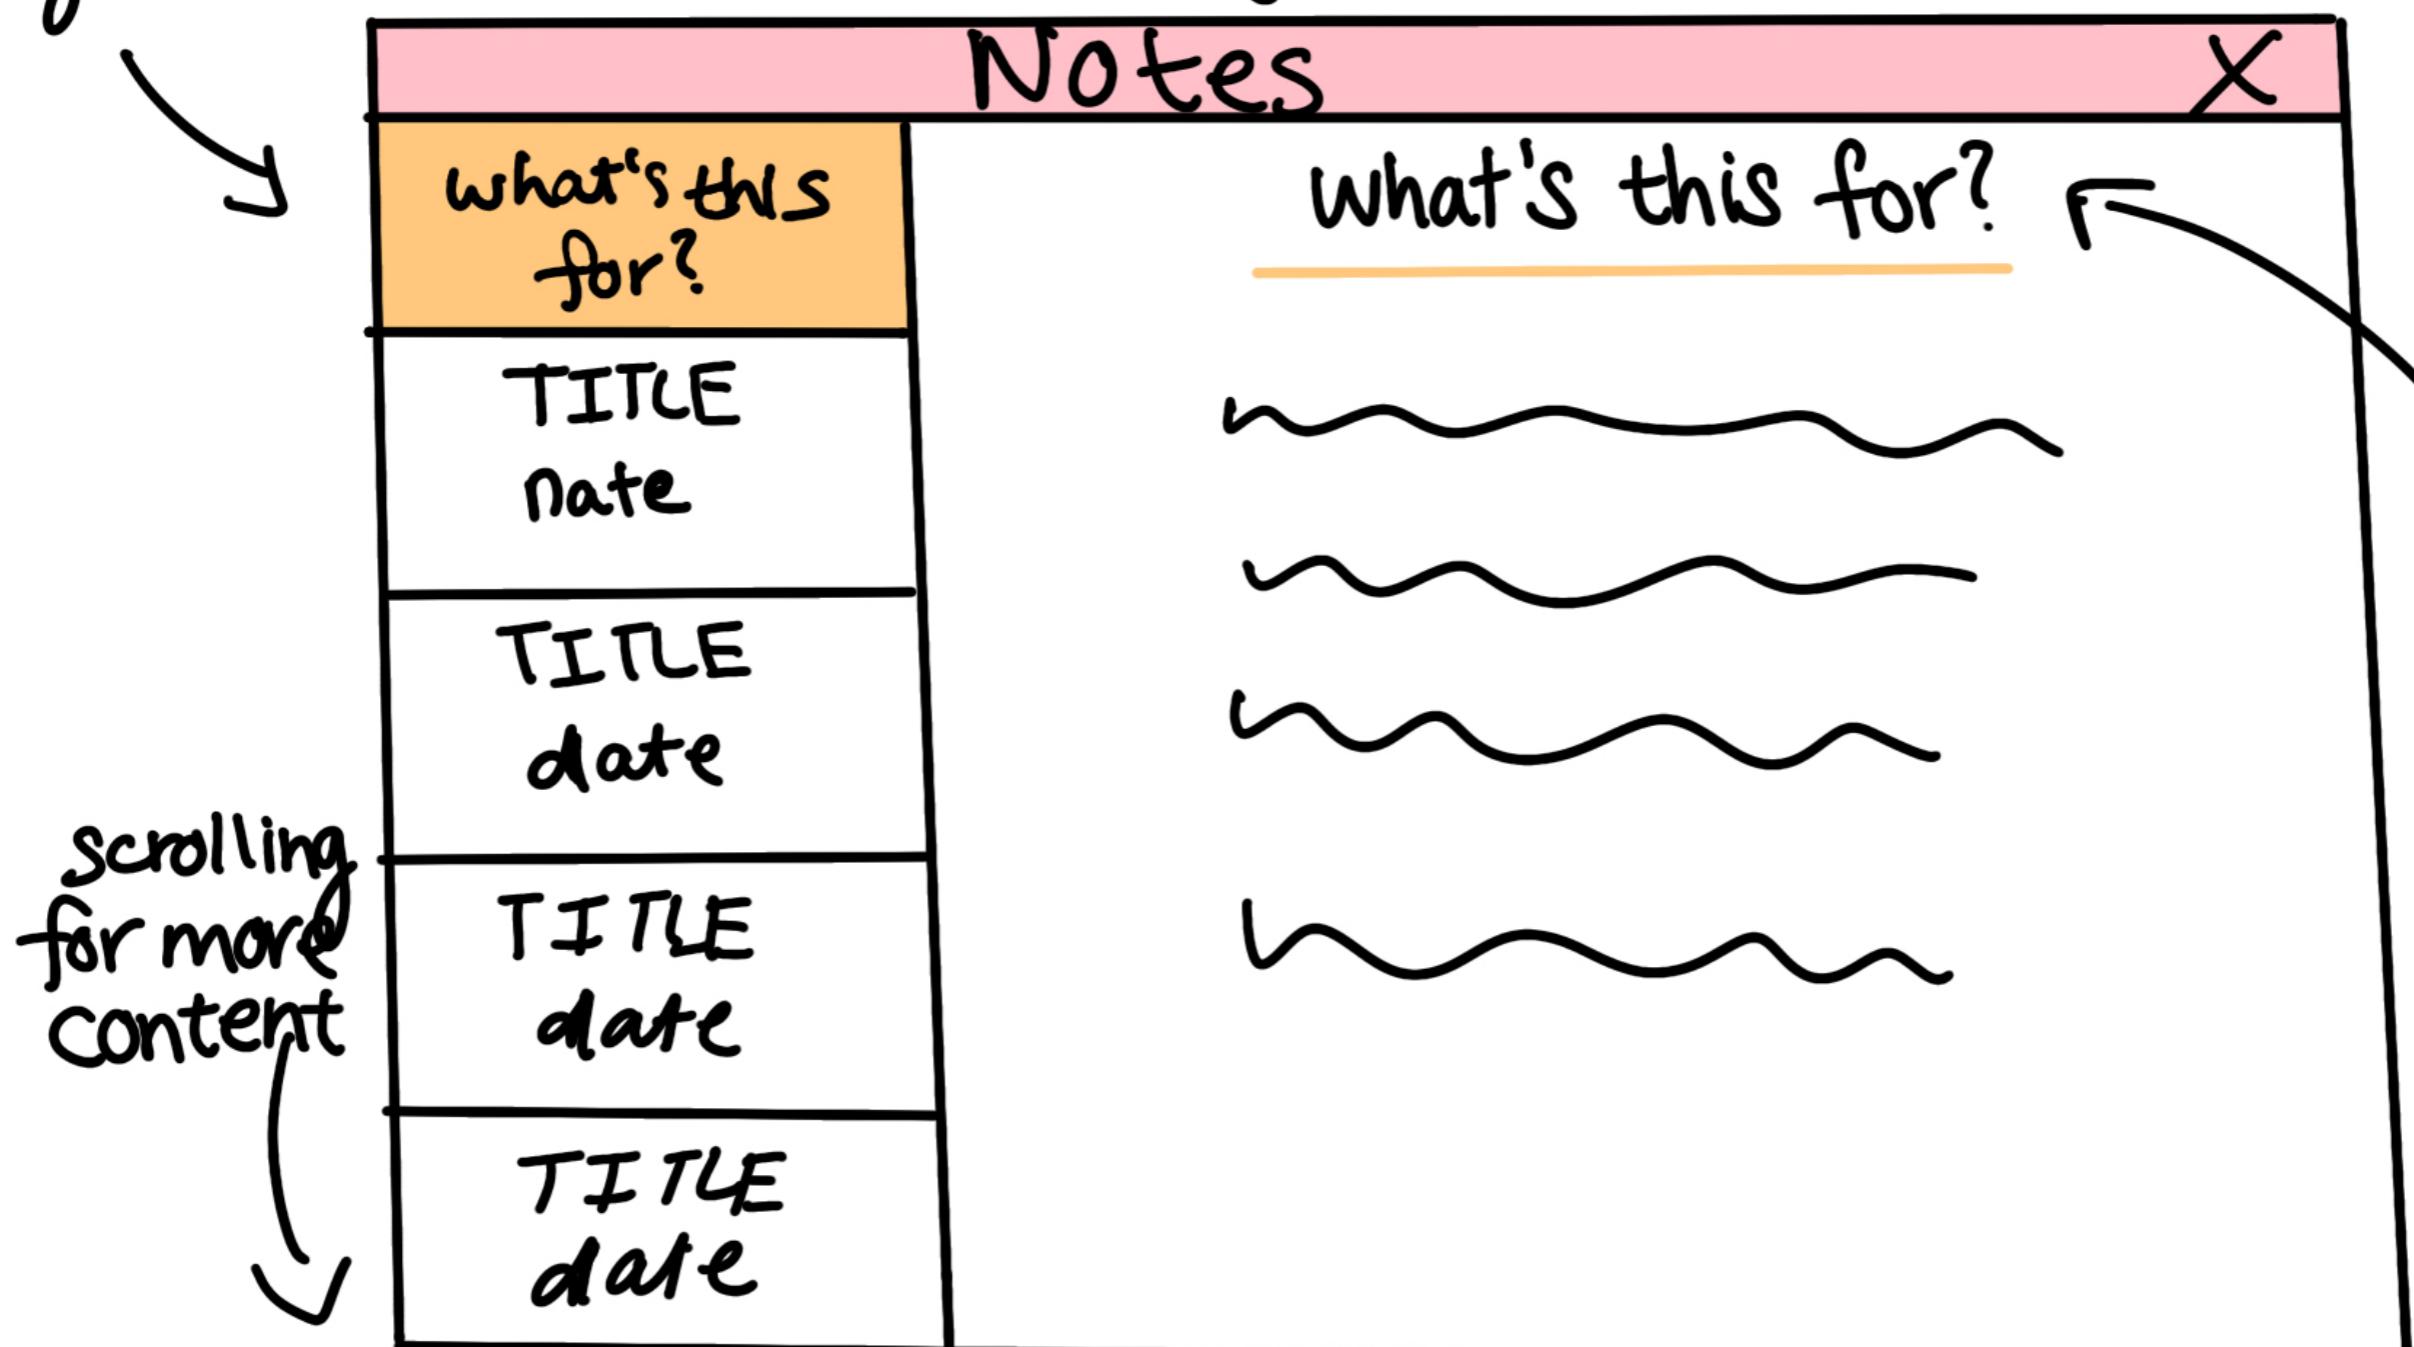

Potential Add-Ons:

- local Storage
so that whenever user "logs" back into website, the colors changed will stay the same (refresh to test)
- make custom background (pic art!!! drawn)

Notes Pop Up

When the person clicks on what they want to read, the box turns yellow

drag move cursor

October 10, 2019

at 3:00PM

Random Title

title
date +
time
(same
format
as Macbook
Notes)

Add-Ons?

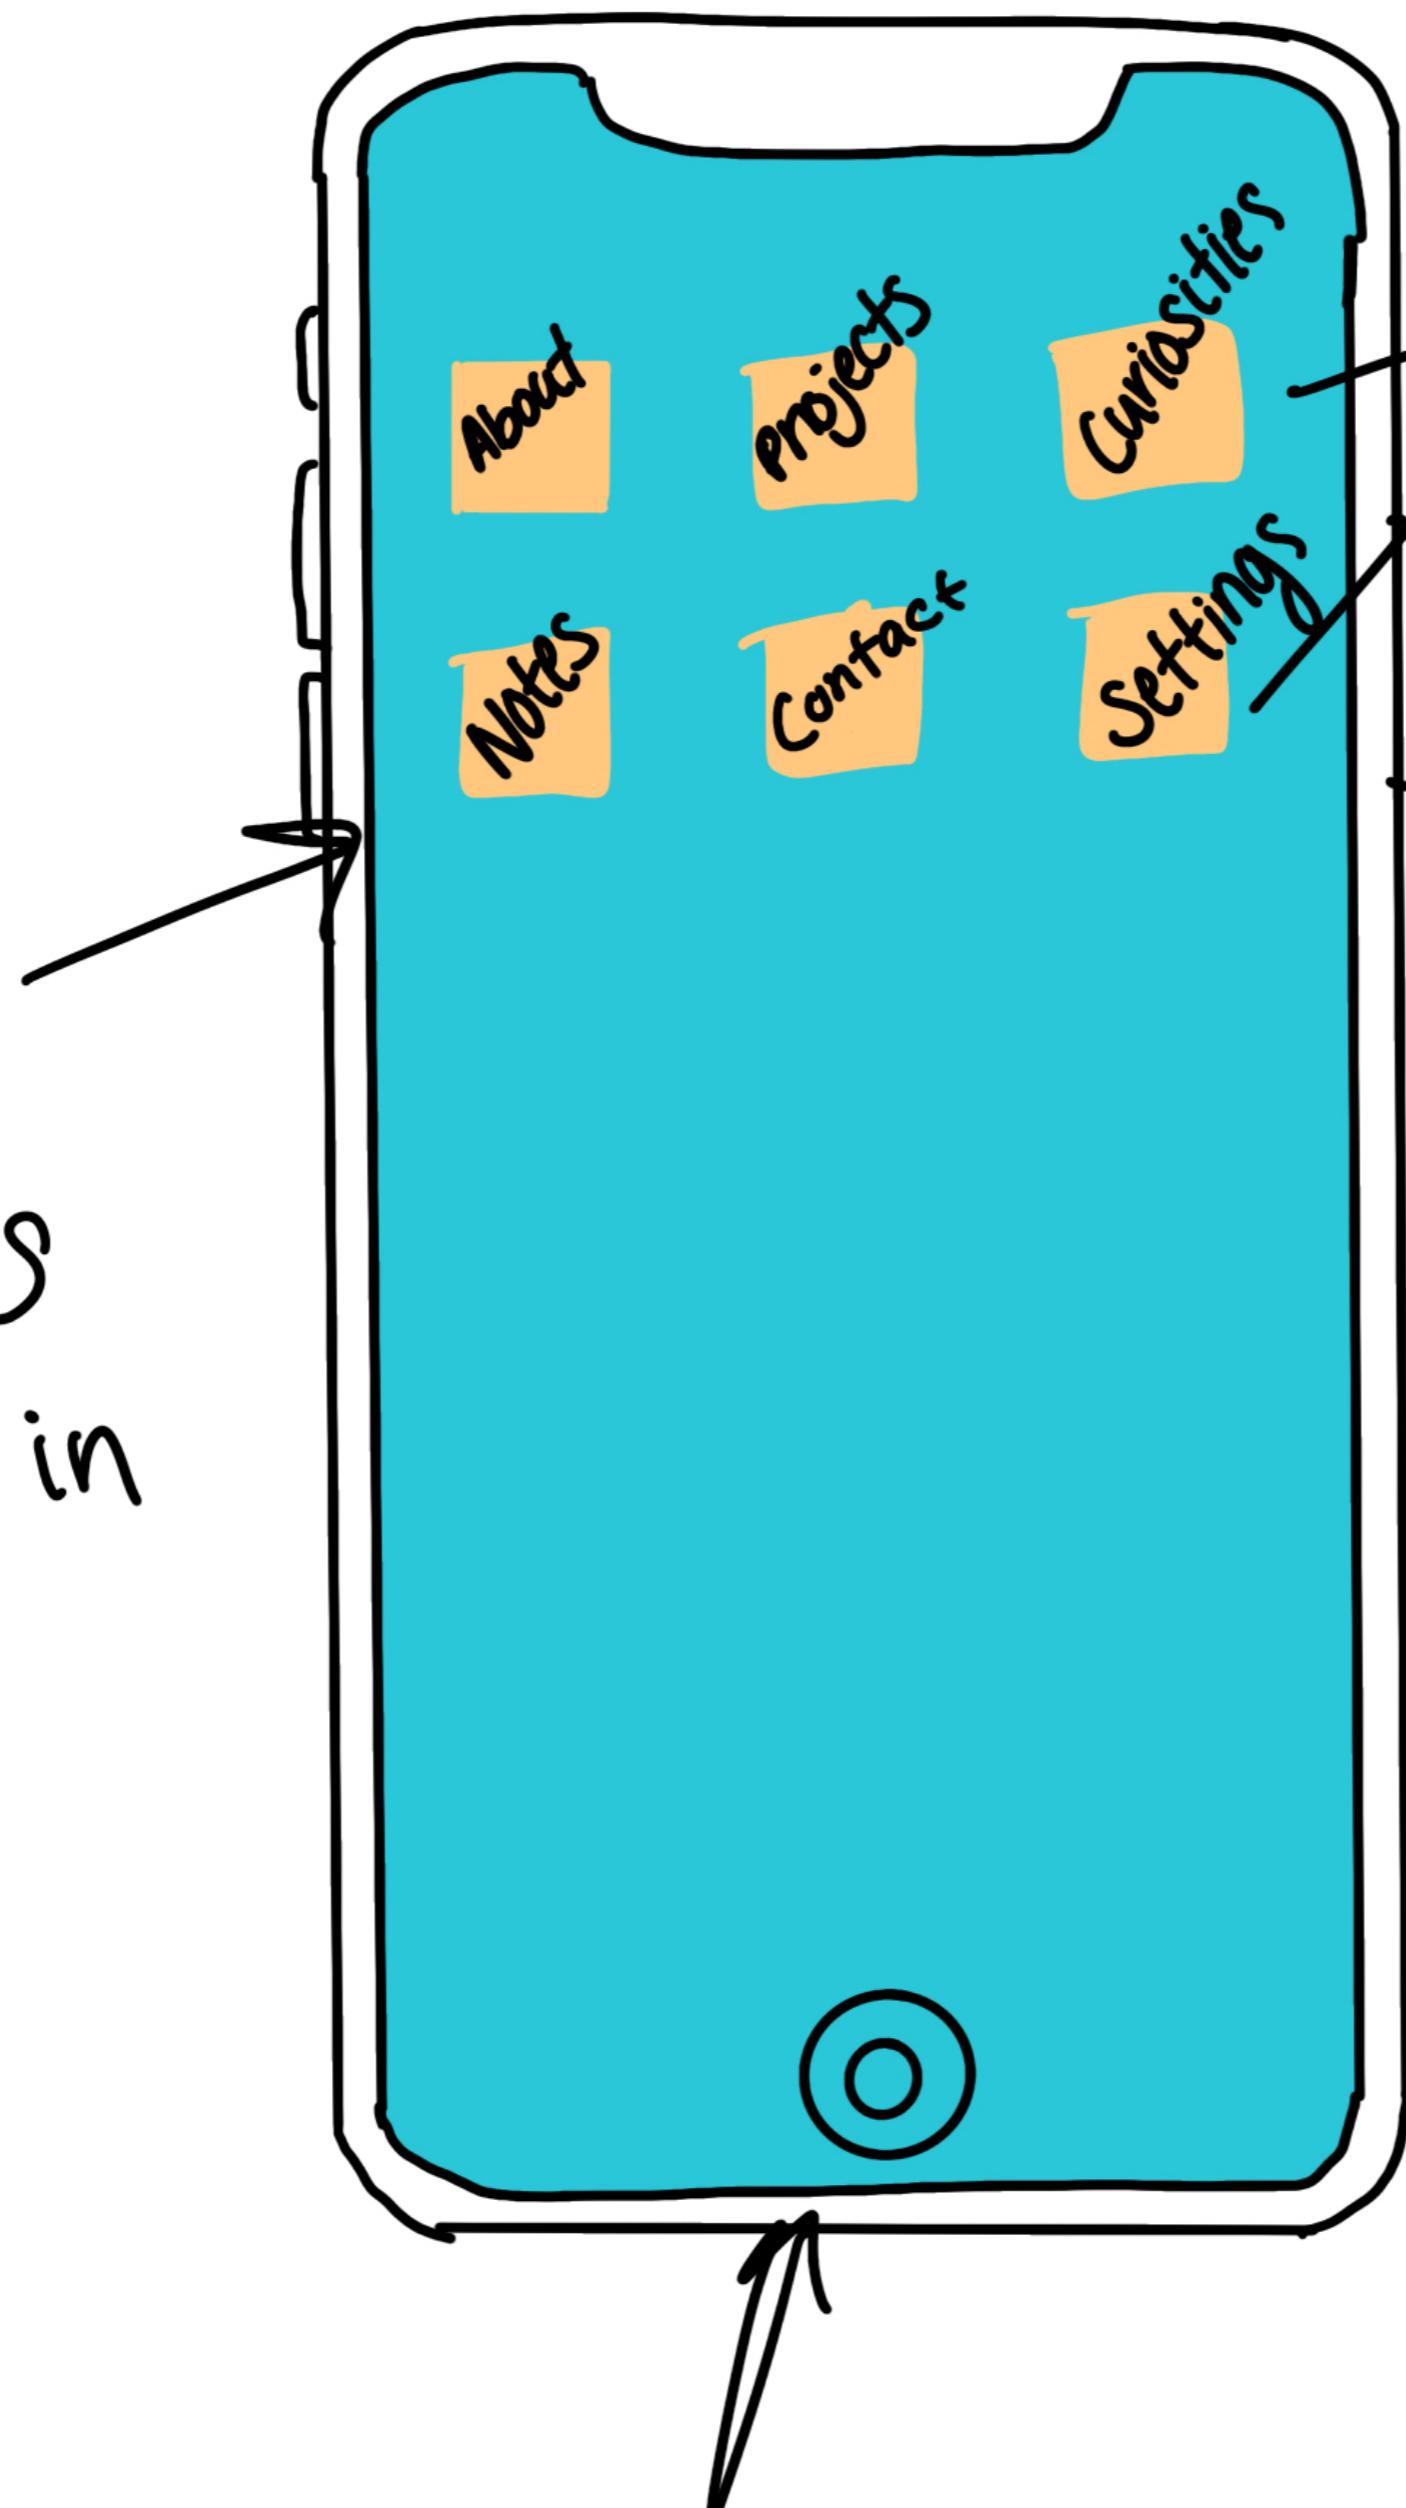

- user is able to write their own notes
- Search through the notes

Phone

Wireframe!!

p.s. shoutout
to media
inquiries for
making this
happen O-O
YOU'RE MY FAV
CSS FUNCTION!!
♥

HOME PAGE

Same
pictures
but now in
squares

imitation home button

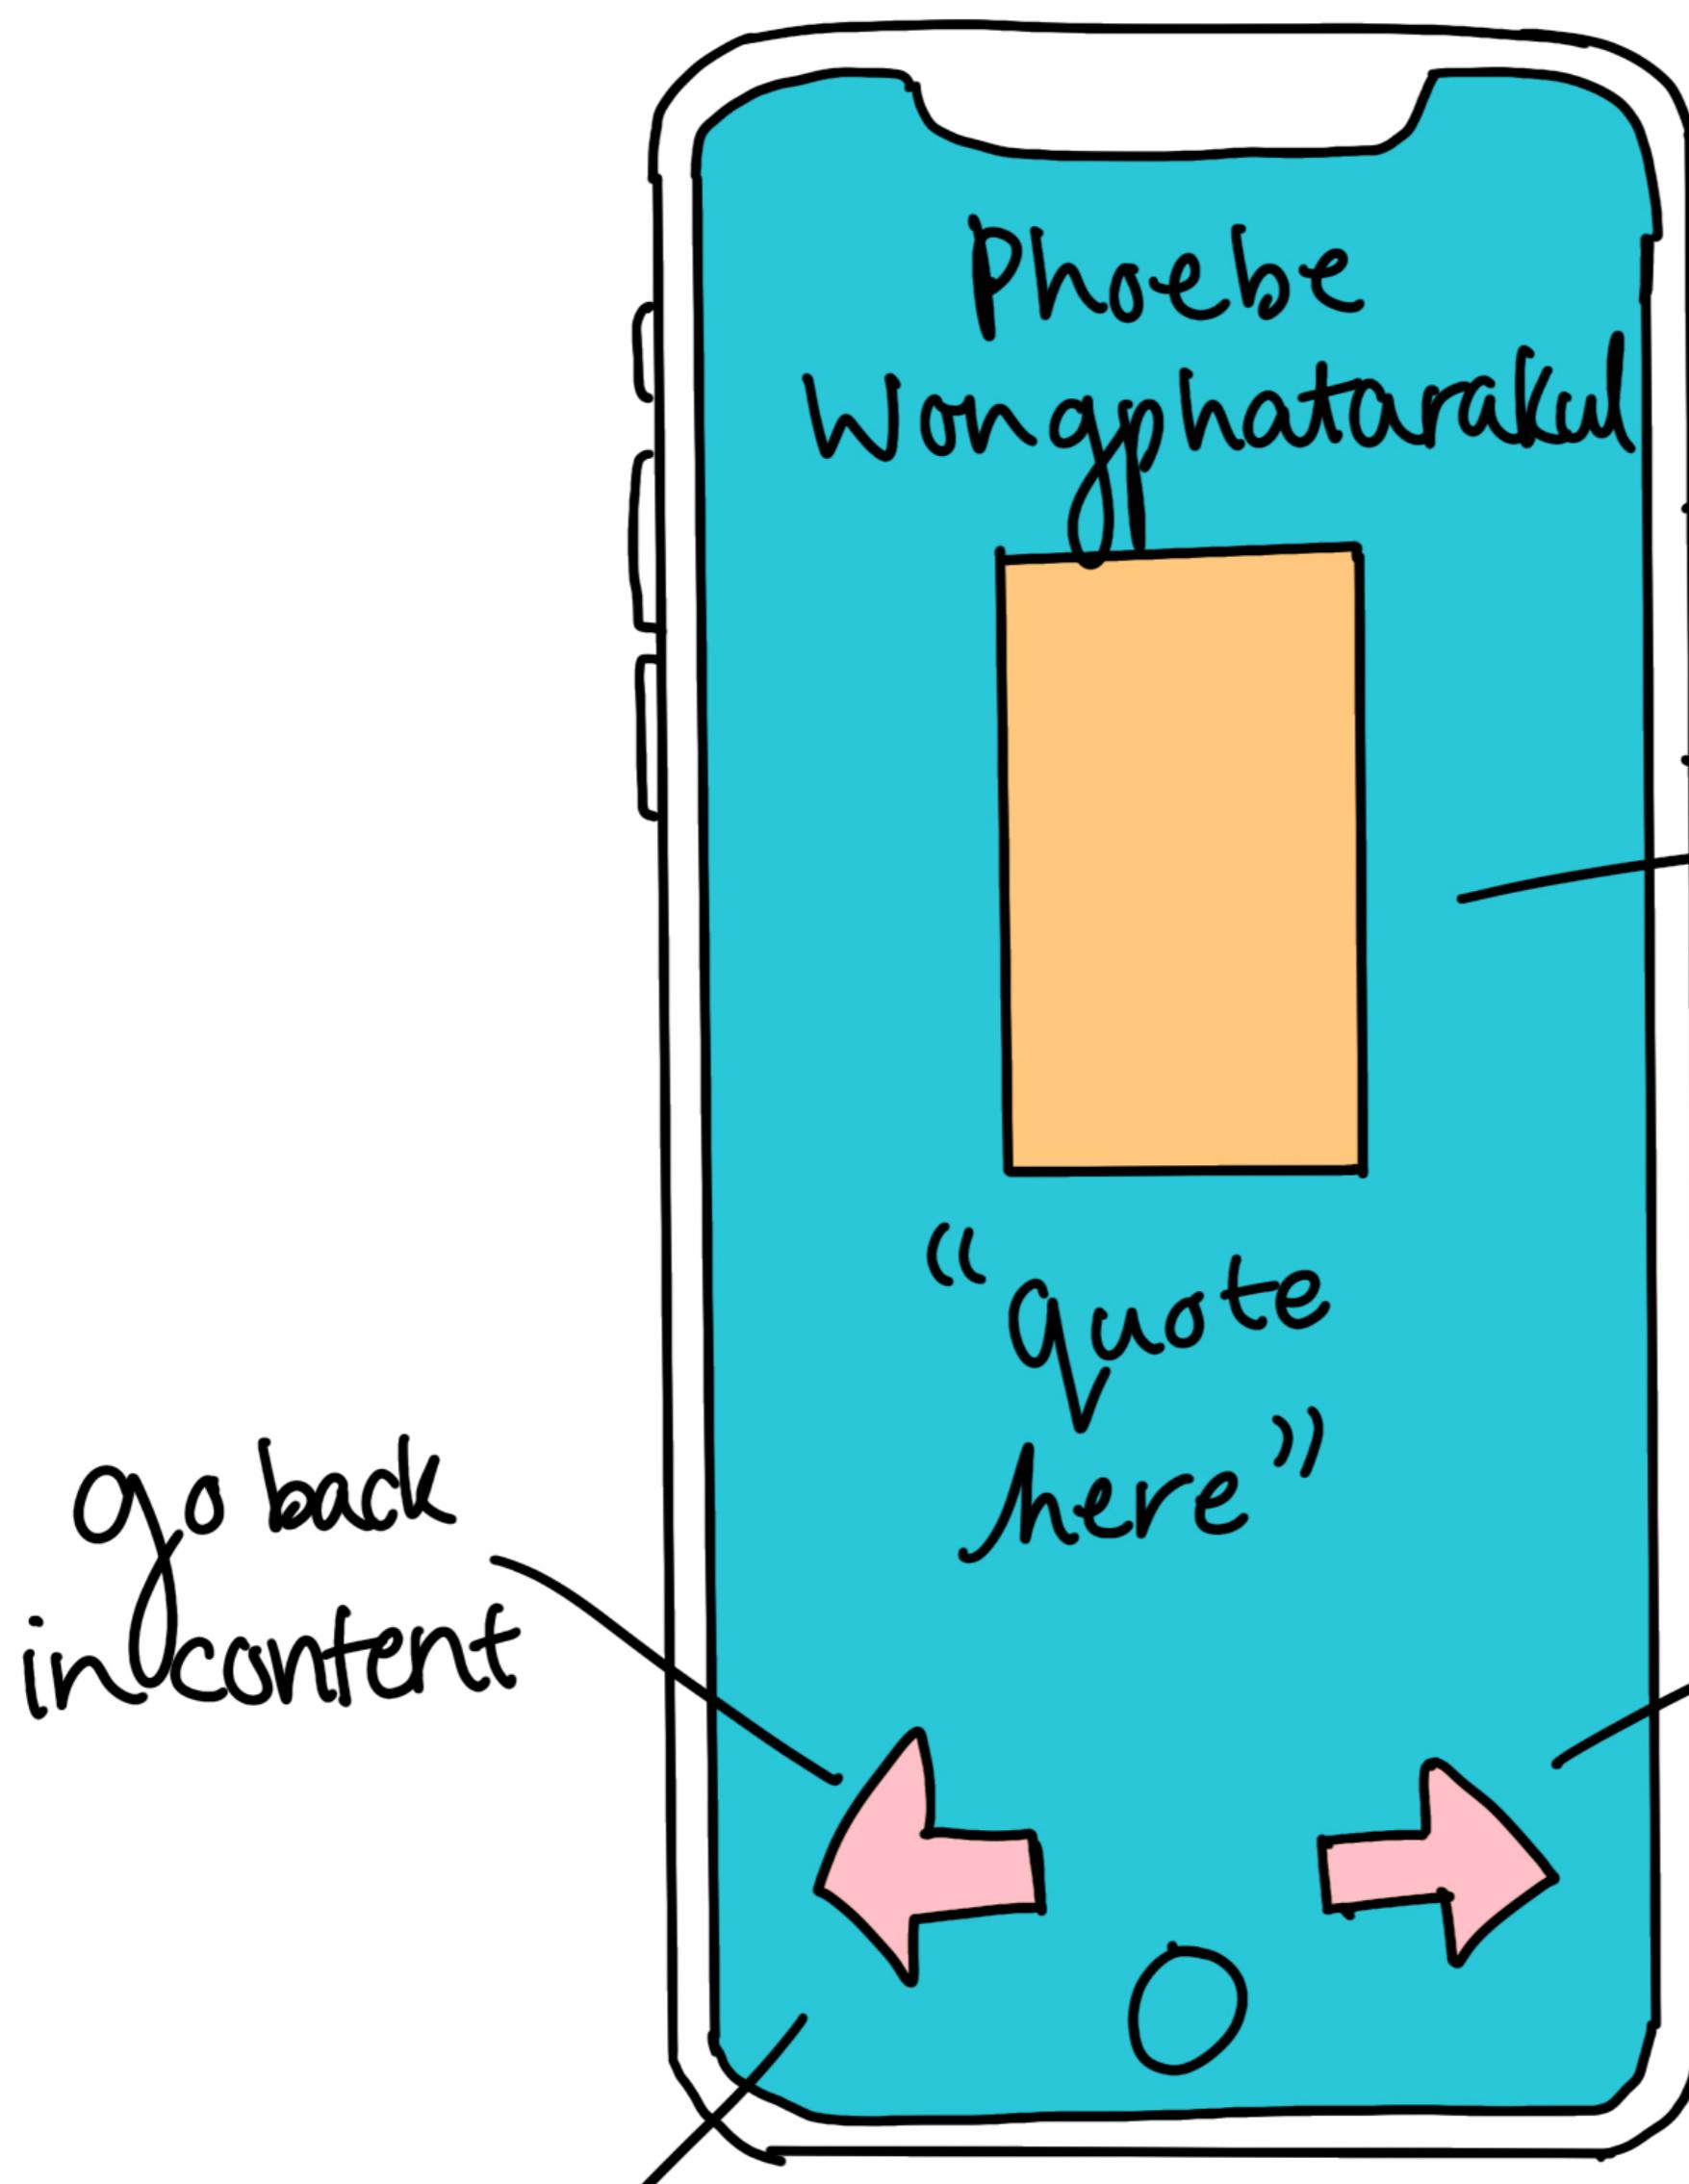

now the
folders will
not be apps,
instead they
will be apps
that will be
taken to (no
more popups)

just going
into pages
now

- use a
preloader to
make it look
like app is
loading

About PAGE (about.html)

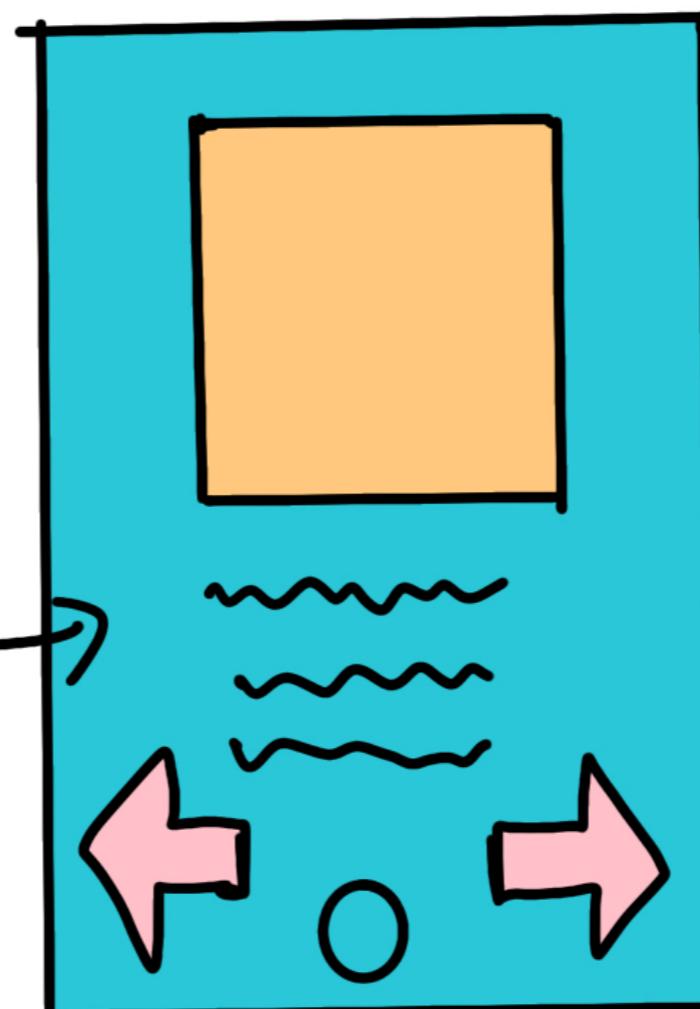

go back
in content

arrows
controlled by
Javascript

text explaining
the pic at the
top

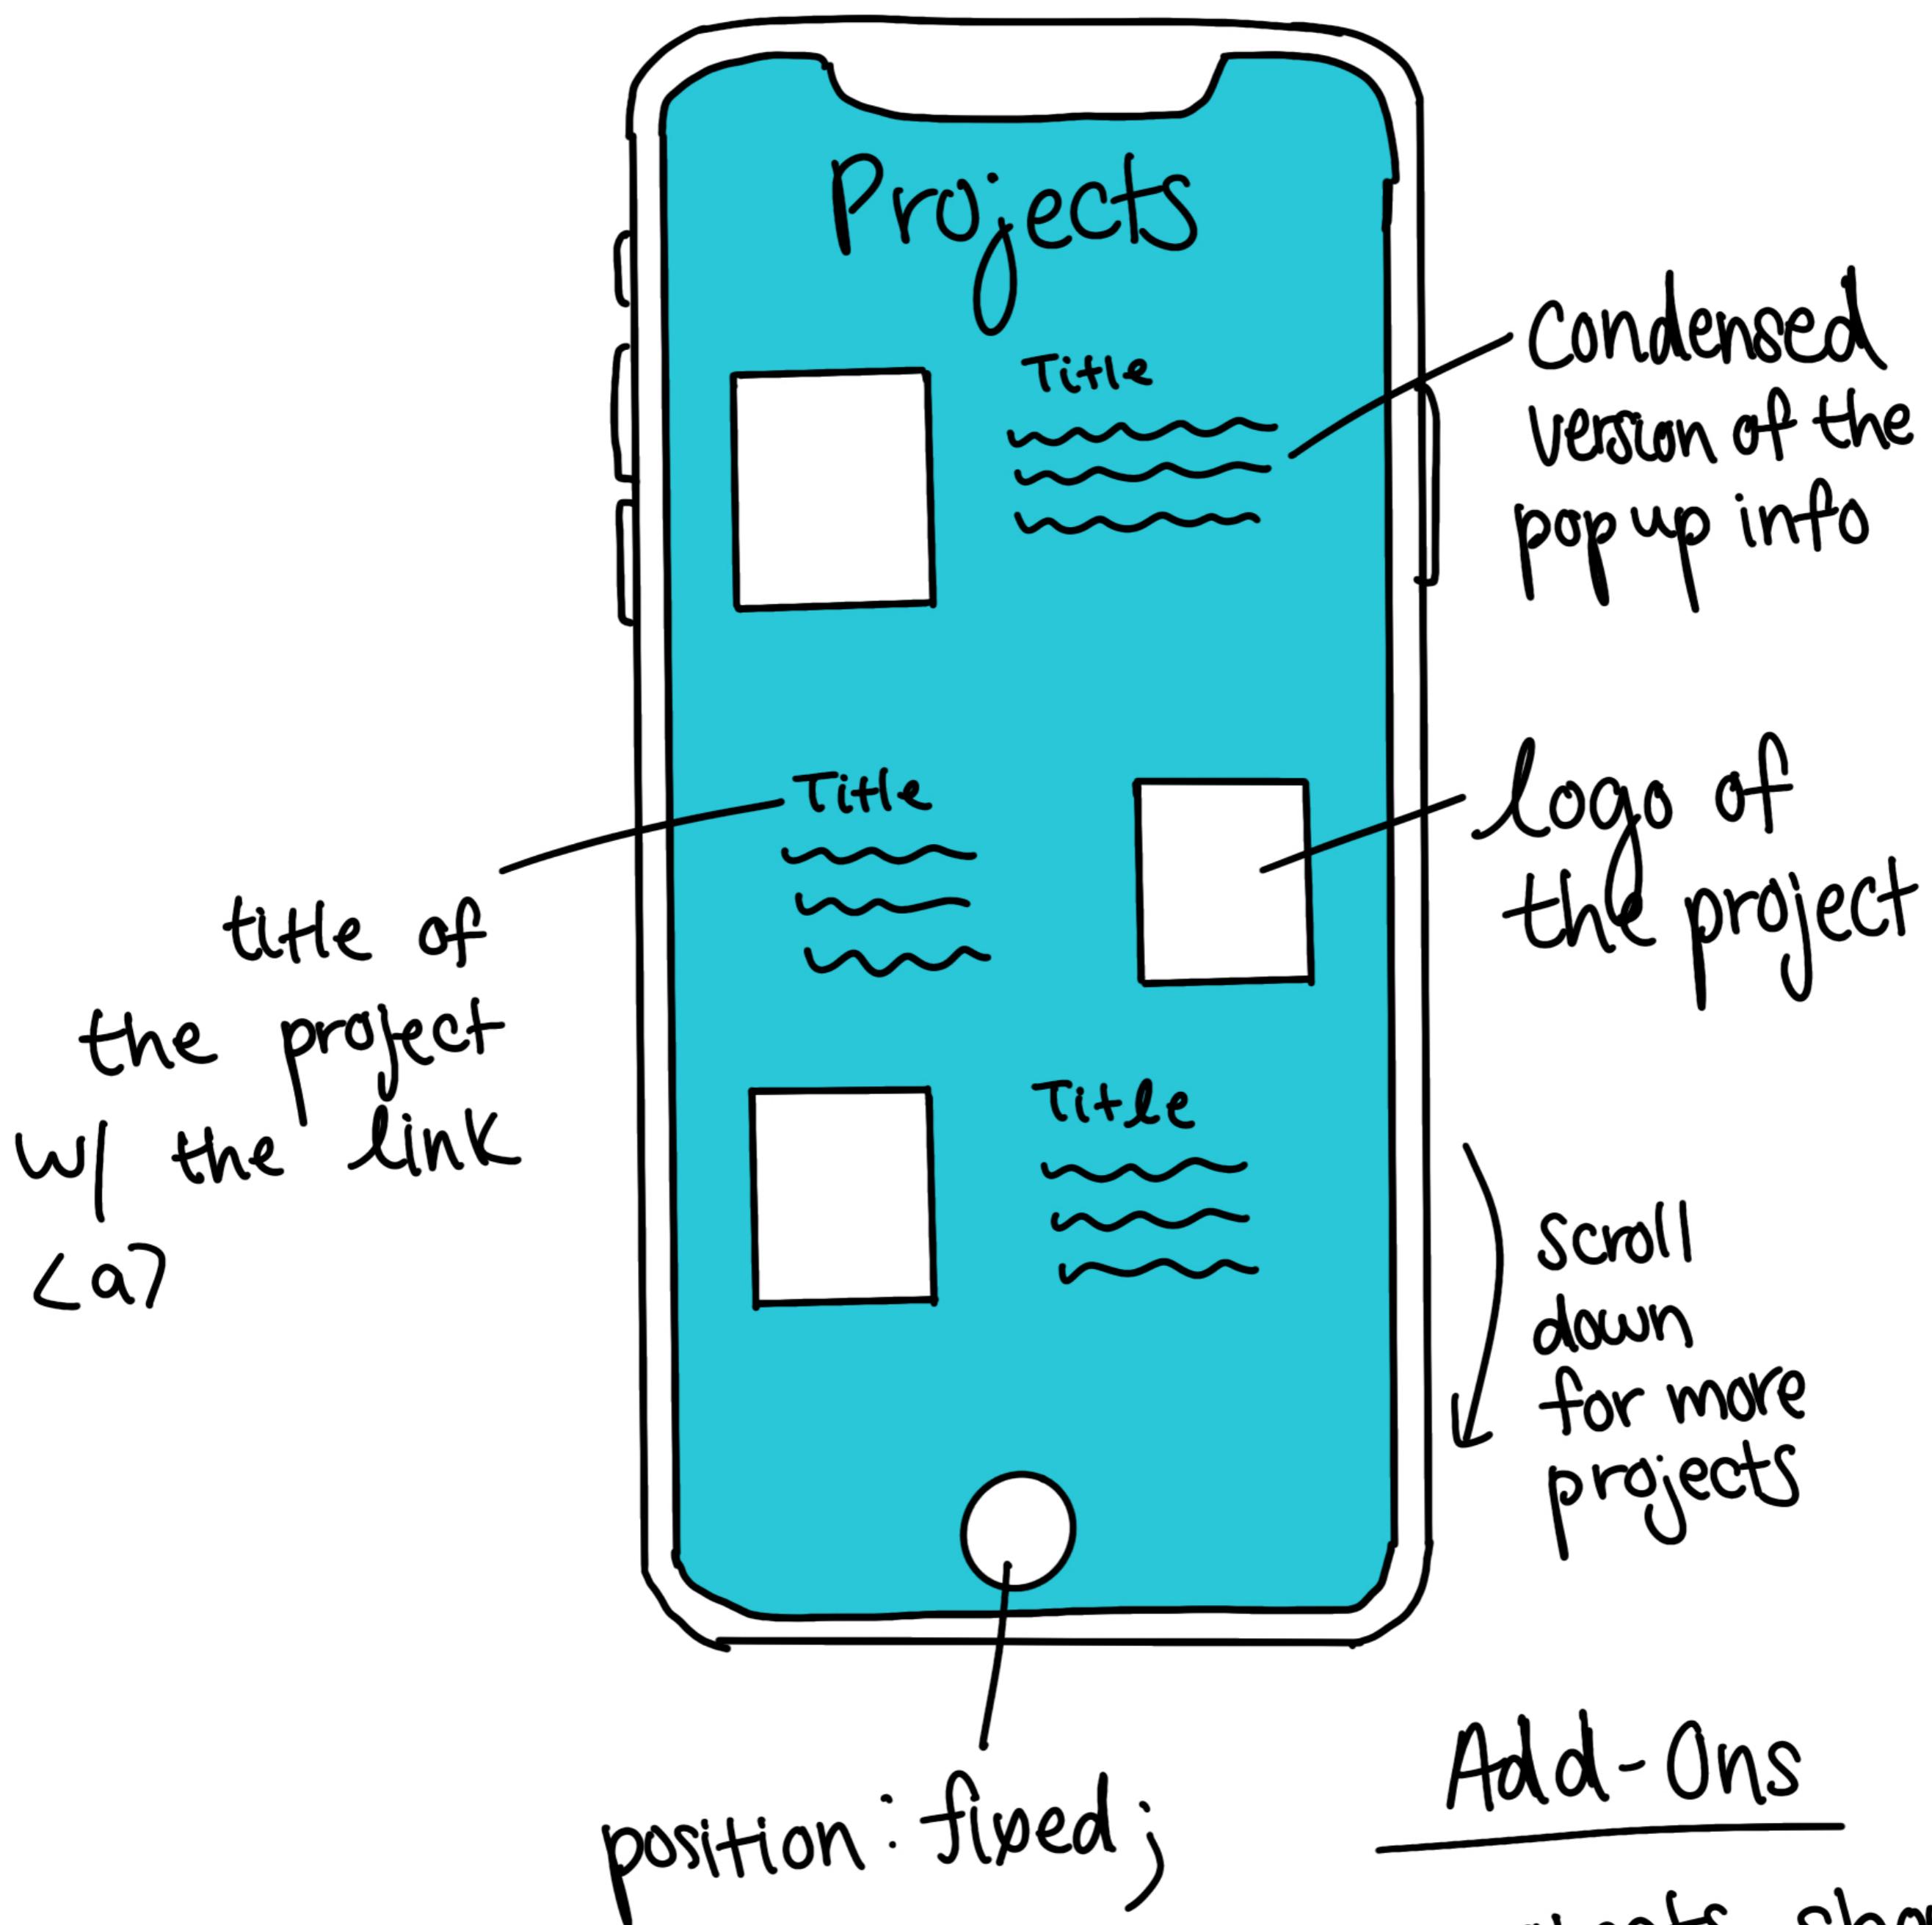

Changes from
Desktop

- can't hover
- only one pic per page
- profile picture

arrows
change to
see new content
what
the other
pages
about it

Projects (project.html)

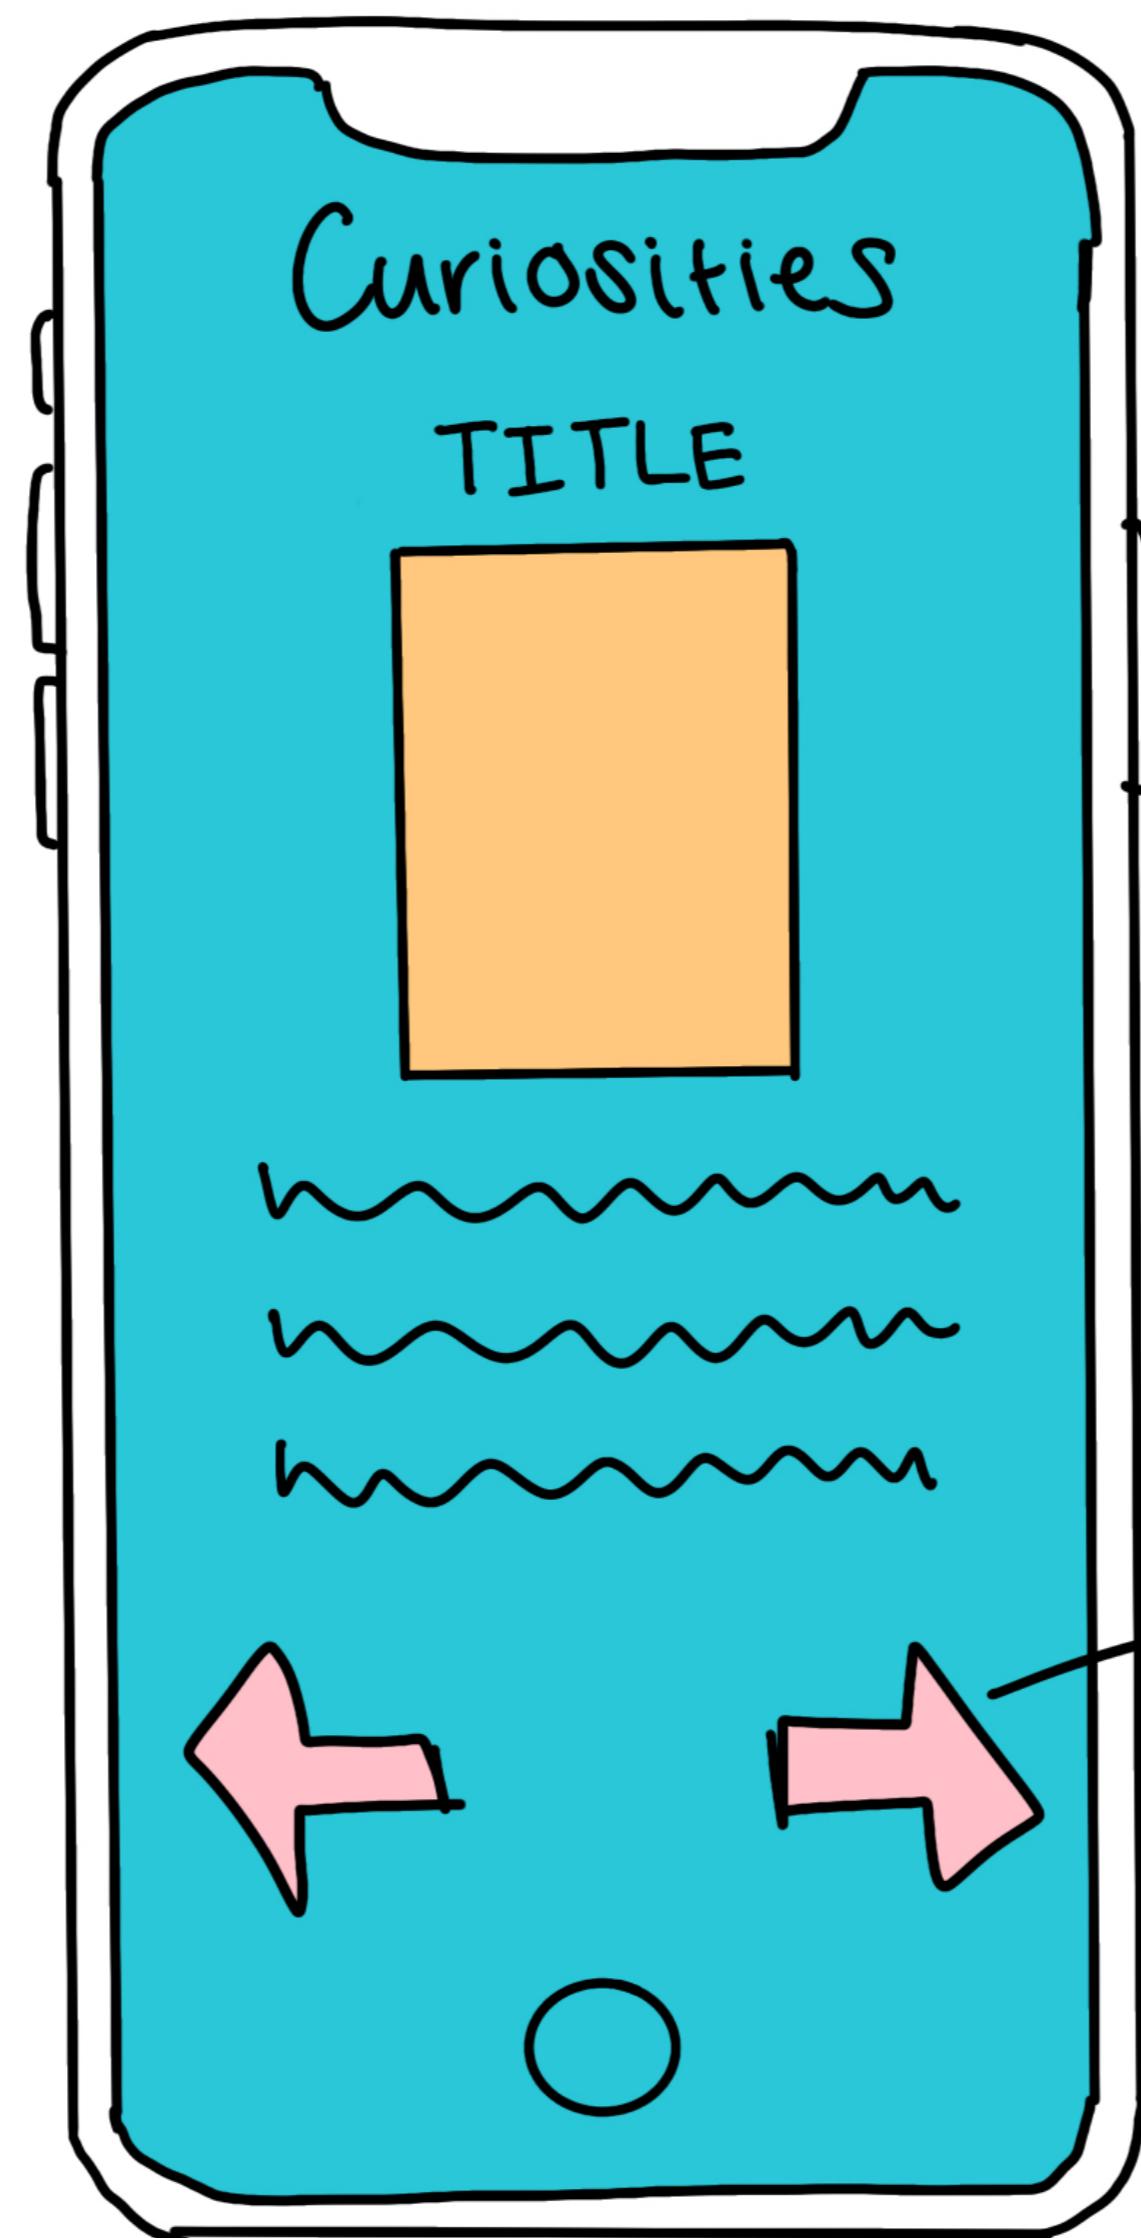

position: fixed;

Add-Ons

- projects should go in alphabetical order (A-Z)
- scroll bar to the project that starts w/ that letter

Curiosities page (cur.html)

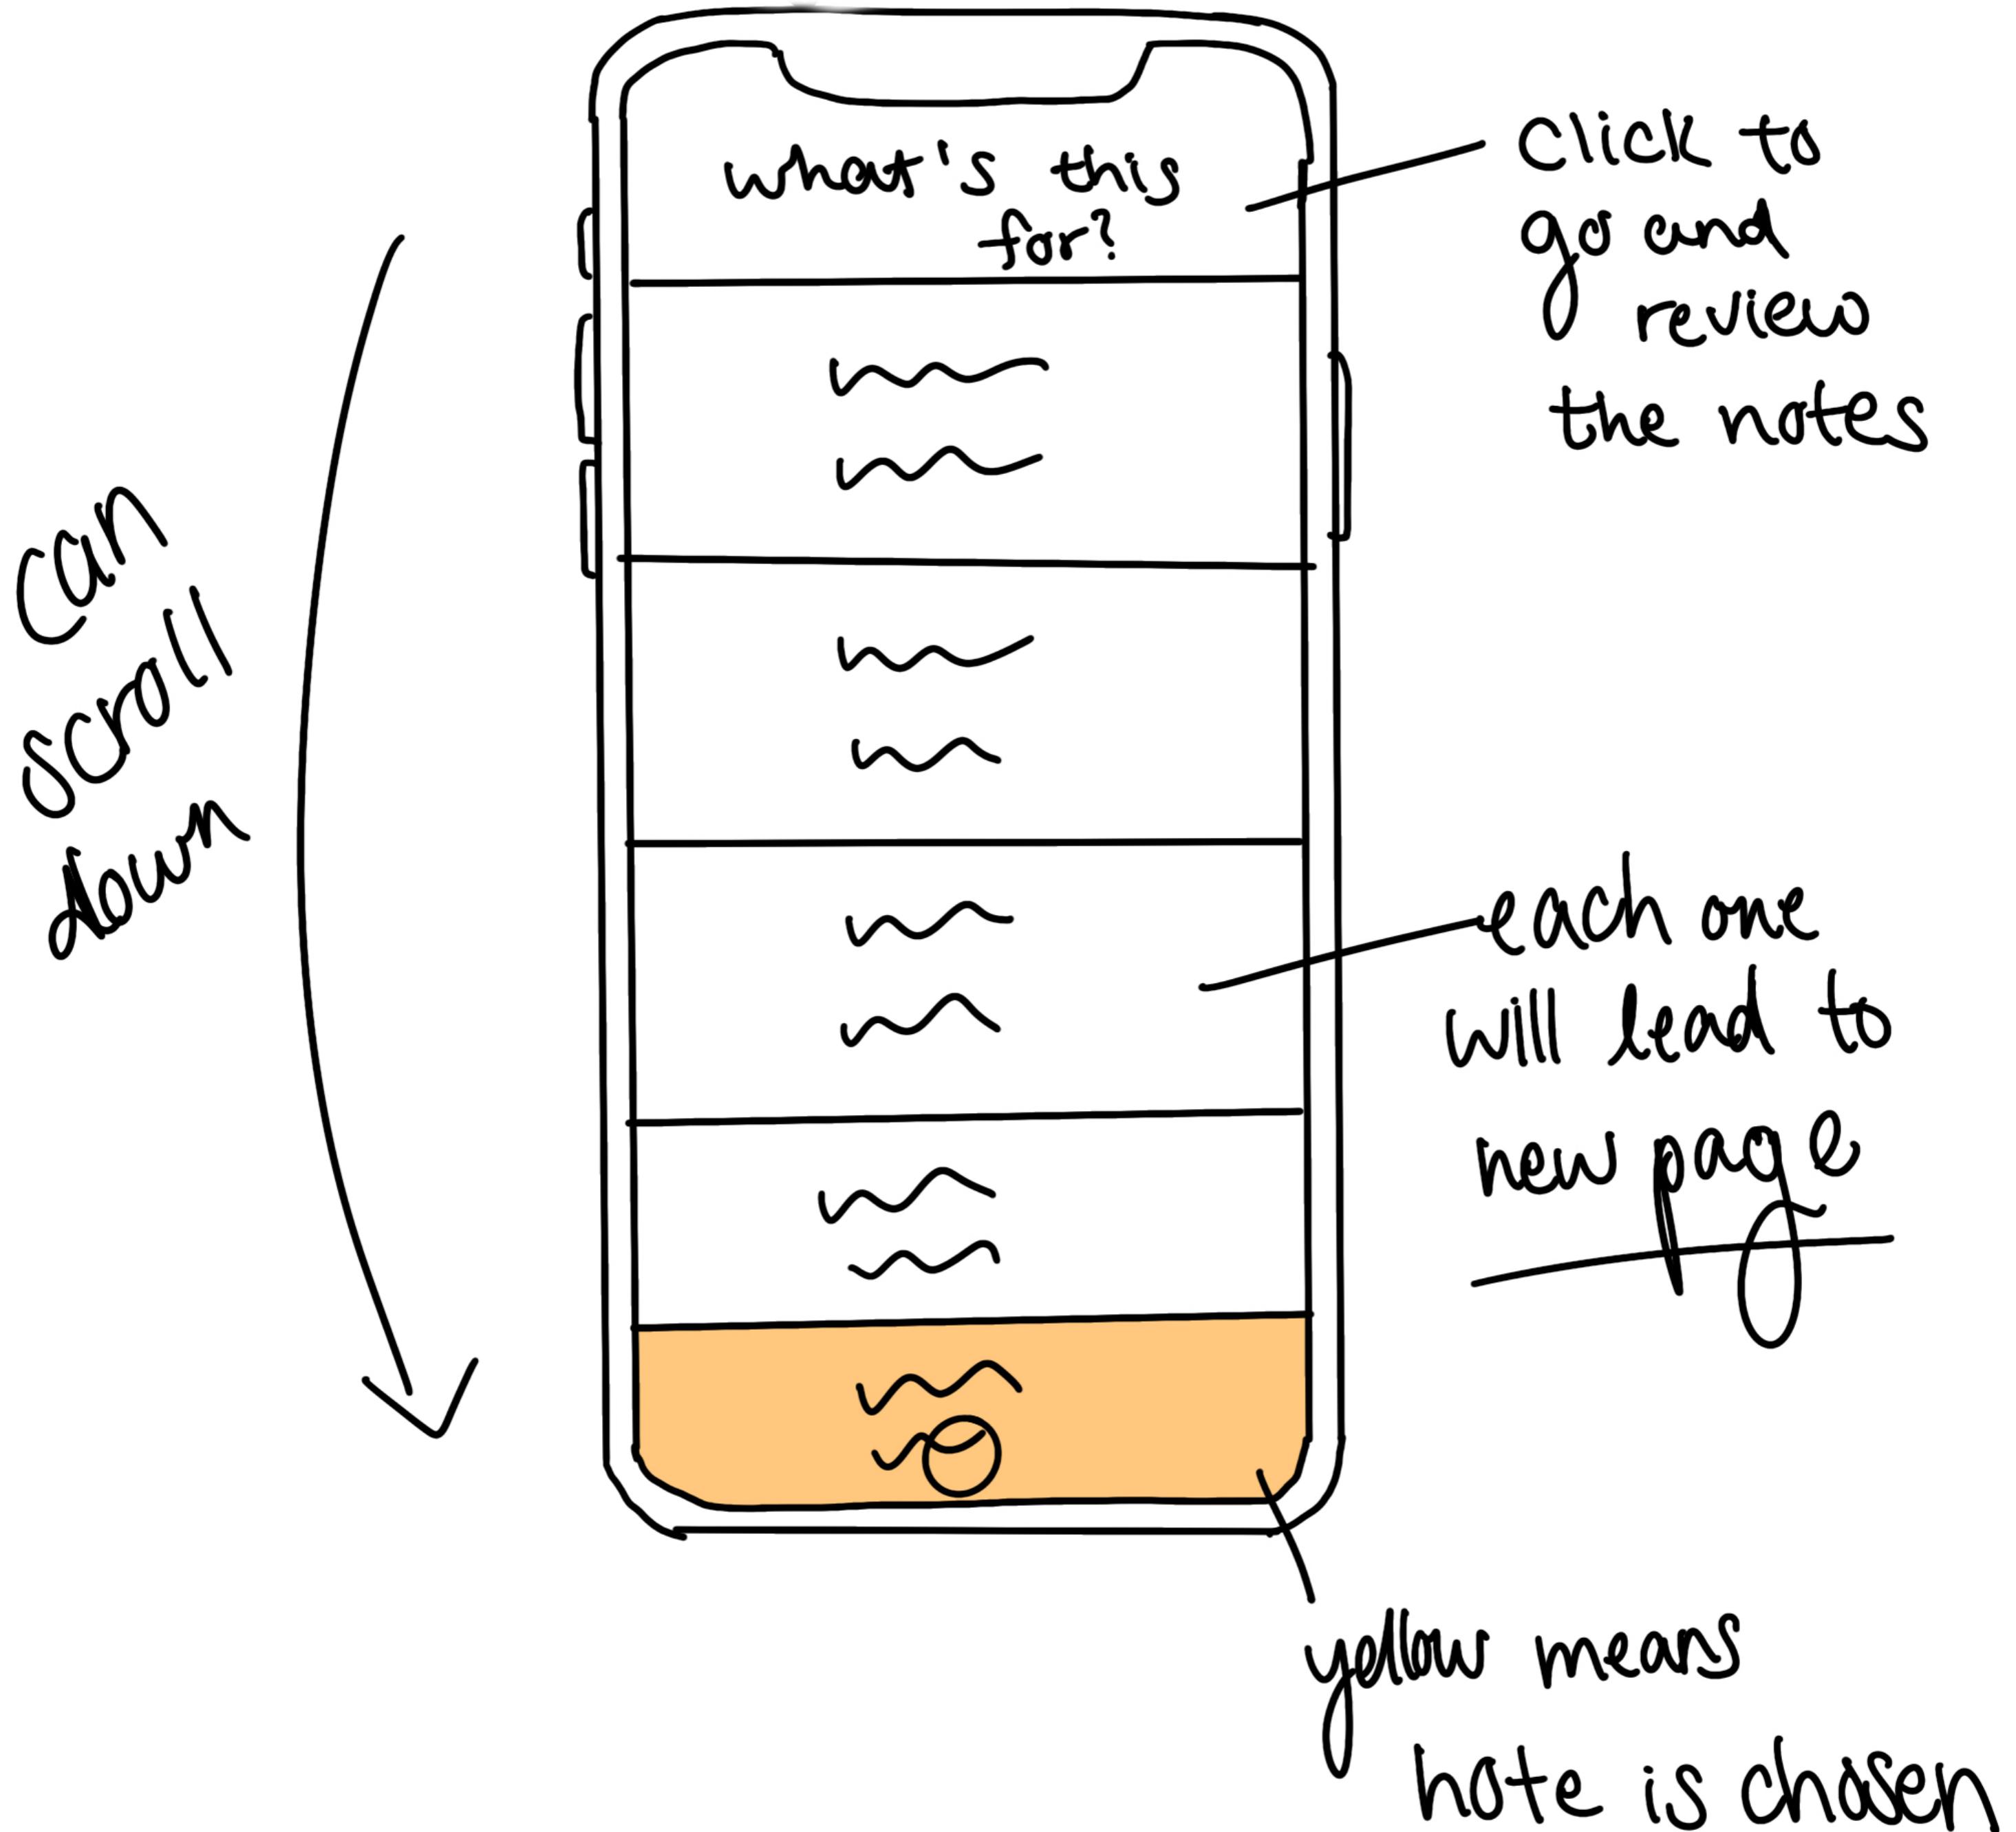

- about the same format as "About" page

arrows to change between each curiosity

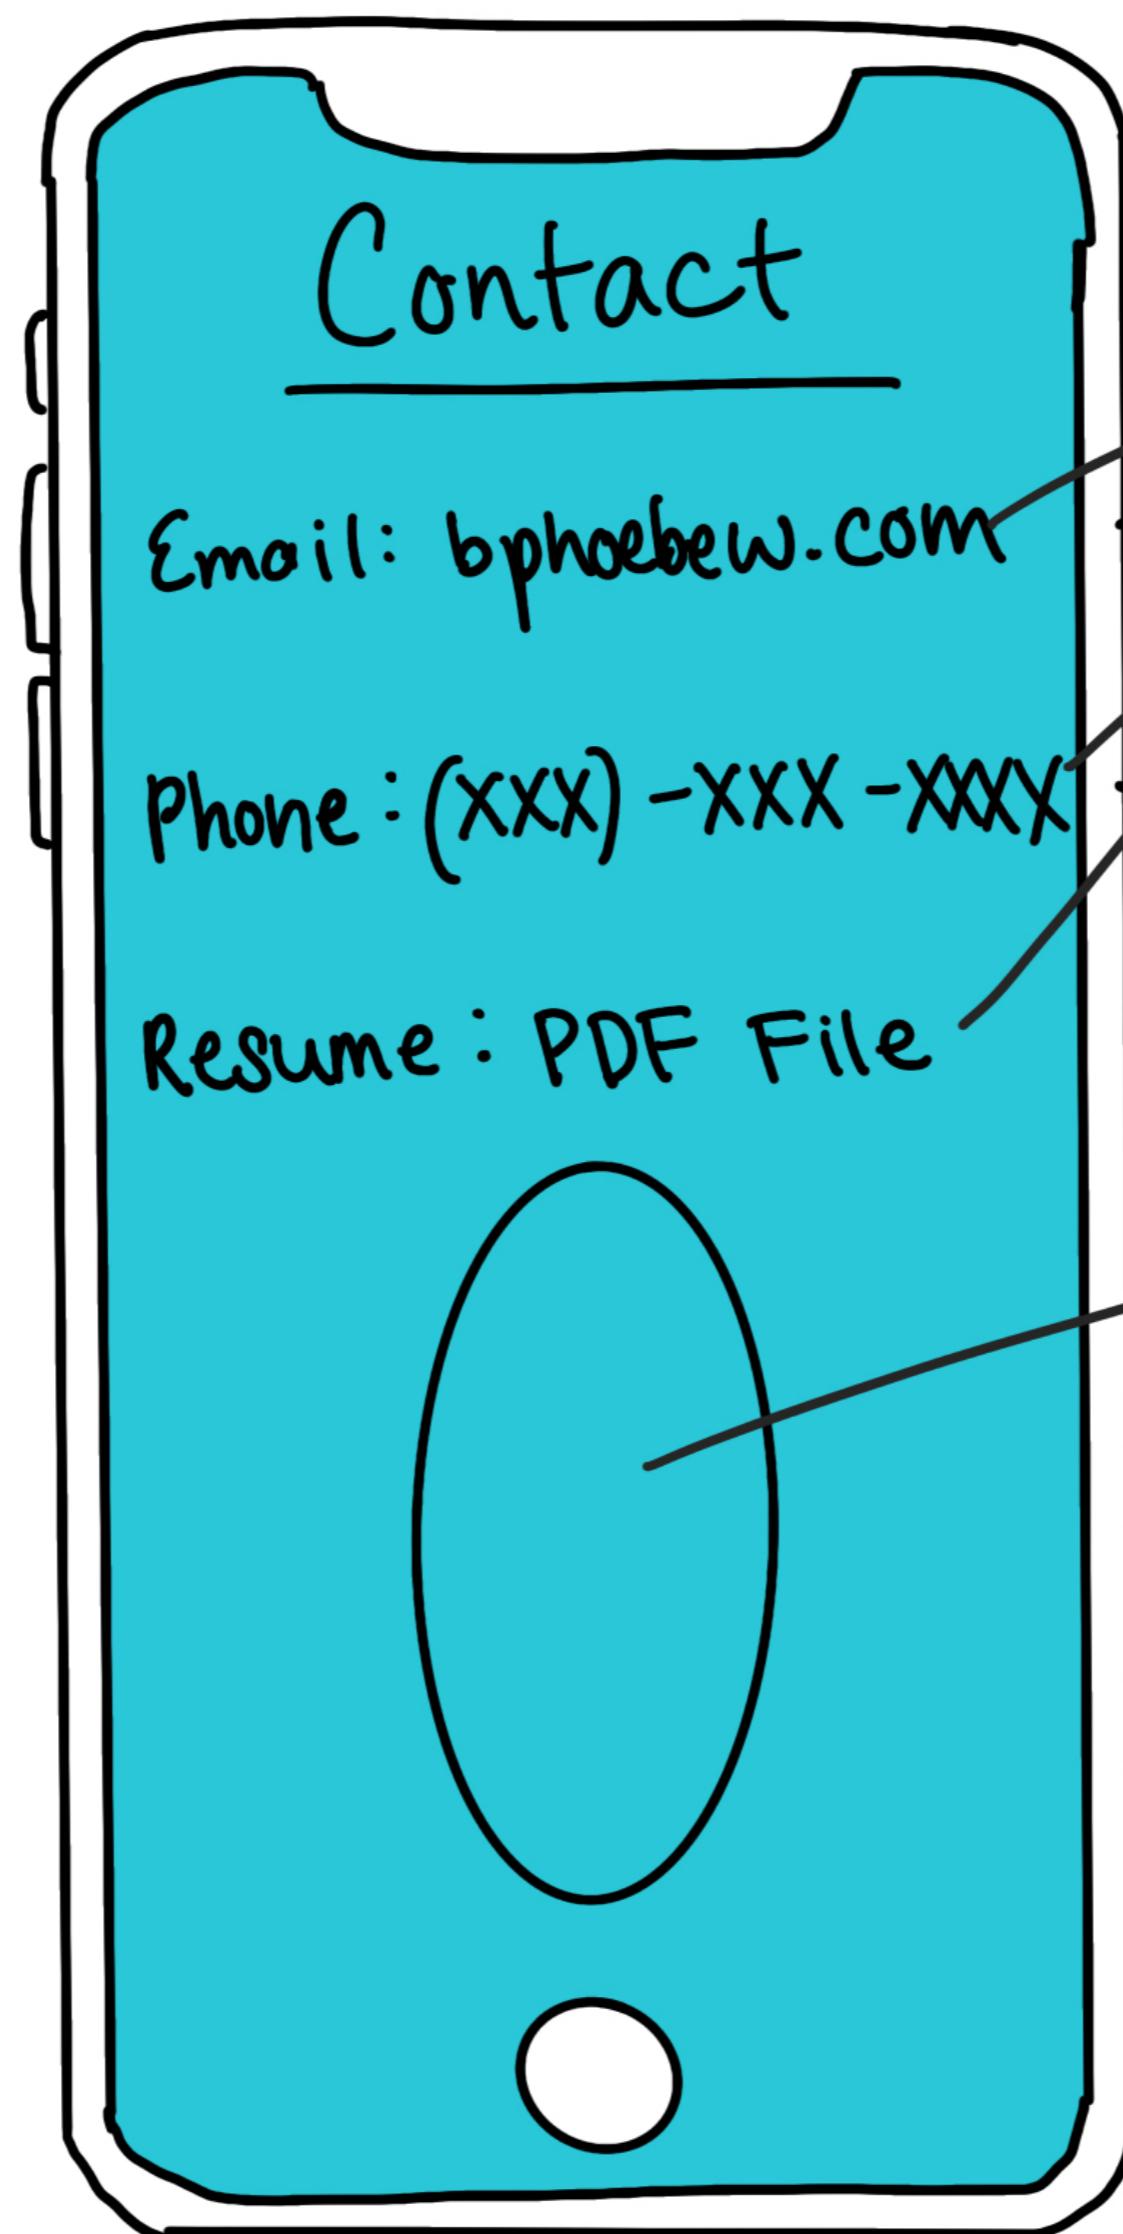

Background

- can't decide if white or blue??

Notes (notes.html)

Contact (contact.html)

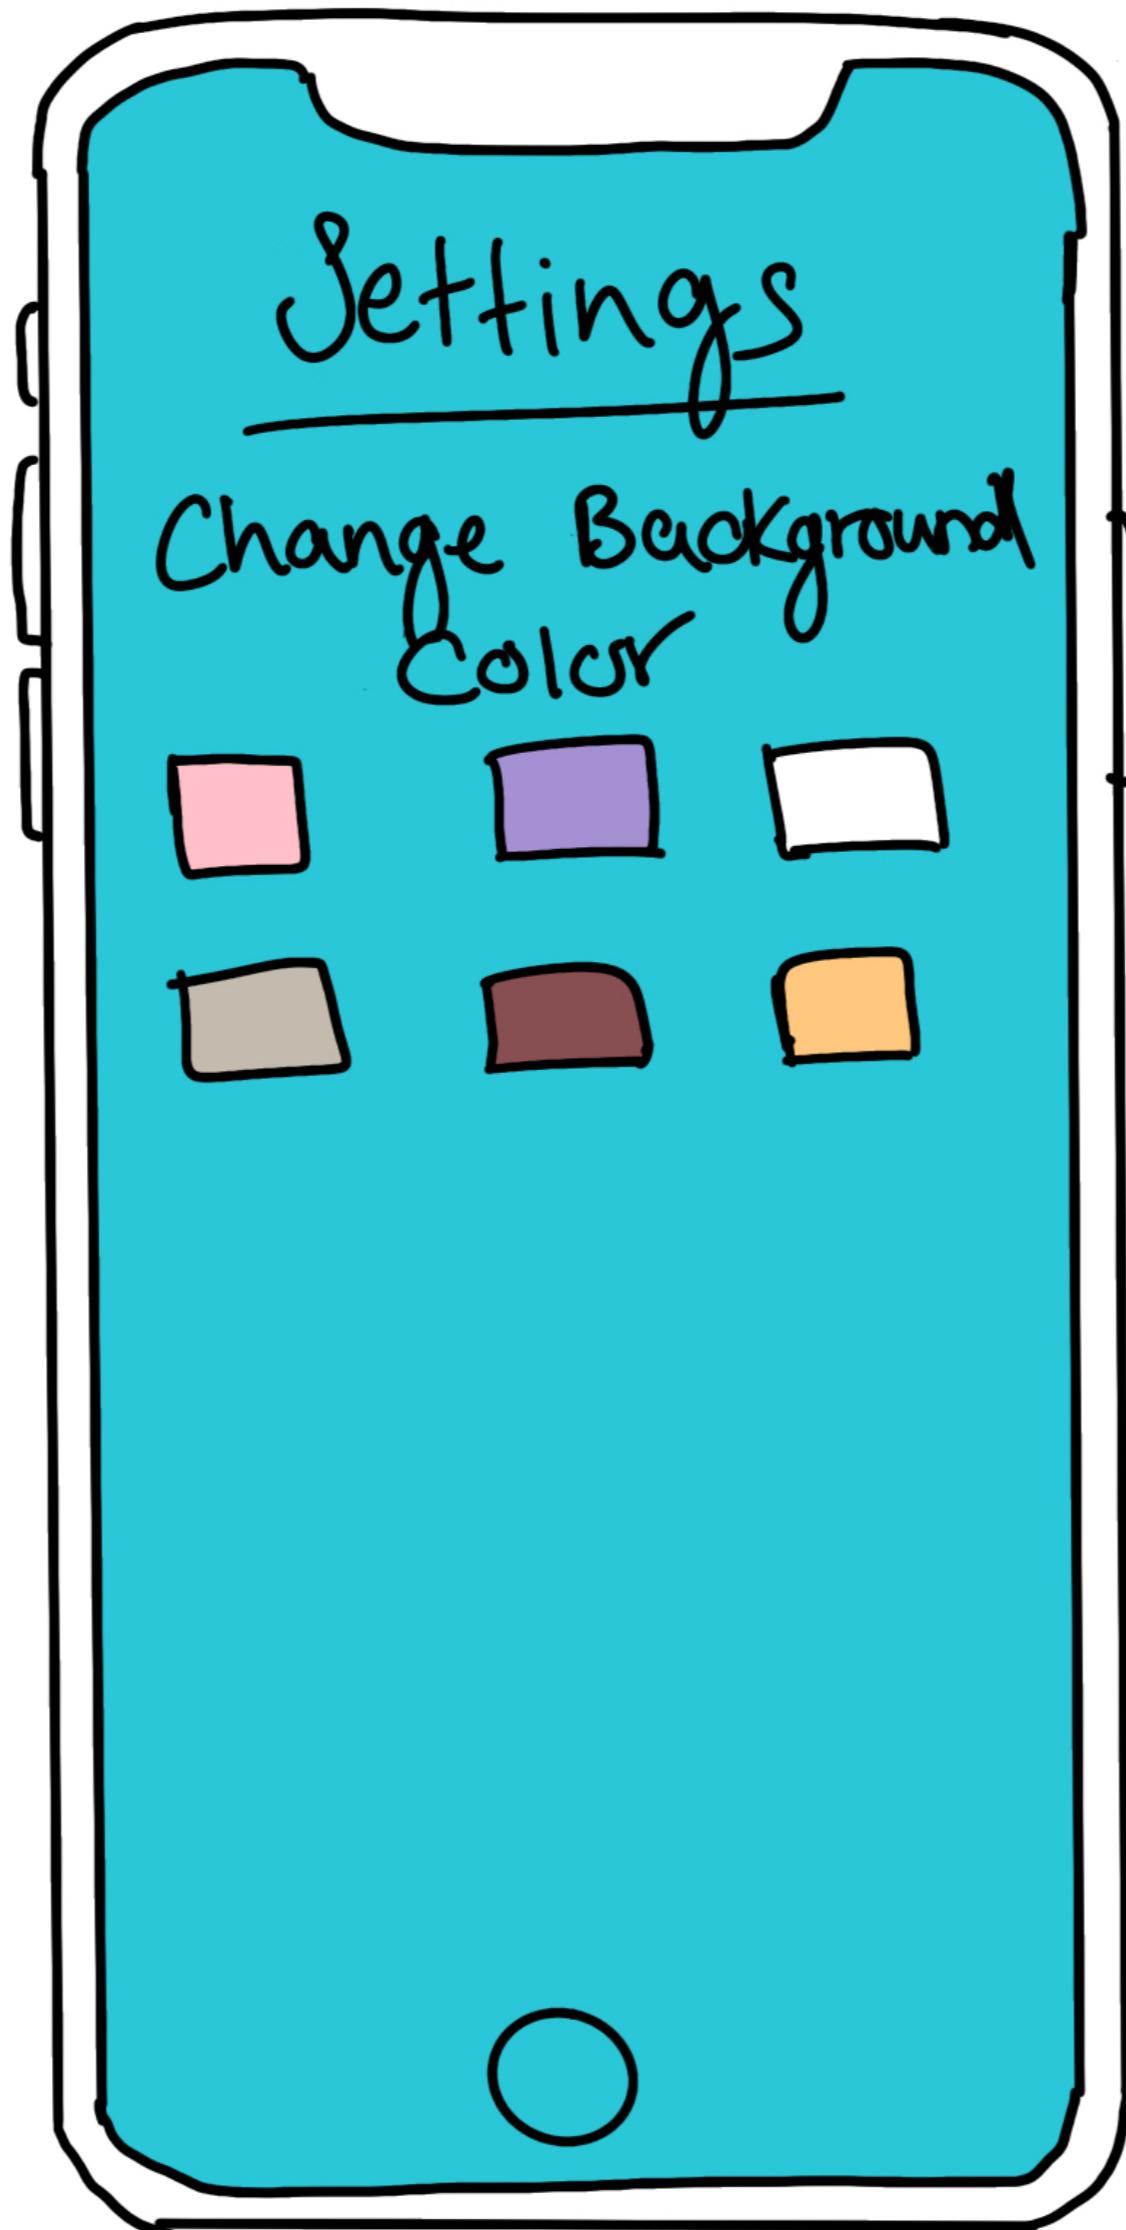

links using
the `a`
tag

cartoon-
drawn
picture

Add-ons

- arrows drawn for each contact?
- needs to add Javascript

Settings (setting.html)

- no header color for Iphones
- use Local Storage to save the files

QR Code
to the website!
